18KVK39Vyavaharika Kannada (Kannada for communication) is for non-Kannada speaking, reading and writing students and **18KAK39**Aadalitha Kannada (Kannada for Administration) is for students who speak, read and write Kannada.

Course prescribed to lateral entry Diploma holders admitted to III semester of Engineering programs

10 NCMC 18MATDIP31 Additional Mathematics - I Mathematics 02 01 -- 03 40 60 100 0

(a) The mandatory non – credit courses Additional Mathematics I and II prescribed for III and IV semesters respectively, to the lateral entry Diploma

(a)The mandatory non – credit courses Additional Mathematics I and II prescribed for III and IV semesters respectively, to the lateral entry Diploma holders admitted to III semester of BE/B.Tech programs, shall attend the classes during the respective semesters to complete all the formalities of the course and appear for the University examination. In case, any student fails to register for the said course/ fails to secure the minimum 40 % of the prescribed CIE marks, he/she shall be deemed to have secured F grade. In such a case, the student have to fulfil the requirements during subsequent semester/s to appear for SEE.

(b) These Courses shall not be considered for vertical progression, but completion of the courses shall be mandatory for the award of degree

Courses prescribed to lateral entry B. Sc degree holders admitted to III semester of Engineering programs

Lateral entrant students from B.Sc. Stream, shall clear the non-credit courses Engineering Graphics and Elements of Civil Engineering and Mechanics of the First Year Engineering Programme. These Courses shall not be considered for vertical progression, but completion of the courses shall be mandatory for the award of degree.

AICTE Activity Points to be earned by students admitted to BE/B.Tech/B. Plan day college programme (For more details refer to Chapter 6,AICTE Activity Point Programme, Model Internship Guidelines): Over and above the academic grades, every Day College regular student admitted to the 4 years Degree programme and every student entering 4 years Degree programme through lateral entry, shall earn 100 and 75 Activity Points respectively for the award of degree through AICTE Activity Point Programme. Students transferred from other Universities to fifth semester are required to earn 50 Activity Points from the year of entry to VTU. The Activity Points earned shall be reflected on the student's eighth semester Grade Card. The activities can be spread over the years, anytime during the semester weekends and holidays, as per the liking and convenience of the student from the year of entry to the programme. However, minimum hours' requirement should be fulfilled. Activity Points (non-credit) have no effect on SGPA/CGPA and shall not be considered for vertical progression. In case students fail to earn the prescribed activity Points, eighth semester Grade Card shall be issued only after earning the required activity Points. Students shall be admitted for the award of degree only after the release of the eighth semester grade card.

Professional Elective -1							
Course code	Course Title						
under18XX64X							
18AI641	Natural Language Processing						
18AI642	Software Project and Management						
18AI643	Web Programming						
18AI644	Foundation forData Science						
	Open Elective –A (18CS65x are not to be opted by CSE / ISE /AIML Programs)						
18CS651	Mobile Application Development						
18CS652	Introduction to Data Structures and Algorithms						
18CS653	Programming in JAVA						
18CS654	Introduction to Operating System						

Students can select any one of the open electives offered by any Department (Please refer to the list of open electives under 18CS65X).

Selection of an open elective is not allowed provided,

- The candidate has studied the same course during the previous semesters of the programme.
- The syllabus content of open elective is similar to that of Departmental core courses or professional electives.
- A similar course, under any category, is prescribed in the higher semesters of the programme.

Registration to electives shall be documented under the guidance of Programme Coordinator/ Adviser/Mentor.

Mini-project work: Based on the ability/abilities of the student/s and recommendations of the mentor, a single discipline or a multidisciplinary Mini-project can be assigned to an individual student or to a group having not more than 4 students.

CIE procedure for Mini project:

- (i) Single discipline: The CIE marks shall be awarded by a committee consisting of the Head of the concerned Department and two senior faculty members of the Department, one of whom shall be the Guide. The CIE marks awarded for the Mini-project work, shall be based on the evaluation of project report, project presentation skill and question and answer session in the ratio 50:25:25. The marks awarded for the project report shall be the same for all the batch mates.
- (ii) Interdisciplinary: Continuous Internal Evaluation shall be group wise at the college level with the participation of all the guides of the college. The CIE marks awarded for the Mini-project, shall be based on the evaluation of project report, project presentation skill and question and answer session in the ratio 50:25:25. The marks awarded for the project report shall be the same for all the batch mates.

SEE for Mini project:

- (i) Single discipline: Contribution to the Mini-project and the performance of each group member shall be assessed individually in the semester end examination (SEE) conducted at the department.
- (ii) Interdisciplinary: Contribution to the Mini-project and the performance of each group member shall be assessed individually in semester end examination (SEE) conducted separately at the departments to which the student/s belong to.

Internship: All the students admitted to III year of BE/B. Tech shall have to undergo mandatory internship of 4 weeks during the vacation of VI and VII semesters and /or VII and VIII semesters. A University examination shall be conducted during VIII semester and the prescribed credit shall be included in VIII semester. Internship shall be considered as a head of passing and shall be considered for the award of degree. Those, who do not takeup/complete the internship shall be declared fail and shall have to complete during subsequent University examination after satisfying the internship requirements

AICTE activity Points: In case students fail to earn the prescribed activity Points, Eighth semester Grade Card shall be issued only after earning the required activity Points. Students shall be admitted for the award of degree only after the release of the Eighth semester Grade Card.

The marks awarded for the project report shall be the same for all the batch mates.

SEE for Project Work Phase - 2:

- (i) Single discipline: Contribution to the project and the performance of each group member shall be assessed individually in semester end examination (SEE) conducted at the department.
- (ii) Interdisciplinary: Contribution to the project and the performance of each group member shall be assessed individually in semester end examination (SEE) conducted separately at the departments to which the student/s belong to.

Internship: Those, who have not pursued /completed the internship shall be declared as fail and have to complete during subsequent University examination after satisfying the internship requirements

AICTE activity Points: In case students fail to earn the prescribed activity Points, eighth semester Grade Card shall be issued only after earning the required activity Points. Students shall be admitted for the award of degree only after the release of the Eighth semester Grade Card. Activity points of the students who have earned the prescribed AICTE activity Points shall be sent the University along with the CIE marks of 8th semester. In case of students who have not satisfied the AICTE activity Points at the end of eighth semester, the column under activity Points shall be marked NSAP (Not Satisfied Activity Points).

¹ TRANSFORM CALCULUS, FOURIER SERIES AND NUMERICAL TECHNIQUES (Effective from the academic year 2018 -2019)										
SEMESTER – III										
Subject Code	18MAT31	CIE Marks	40							
Number of Contact Hours/Week	2:2:0	SEE Marks	60							
Total Number of Contact Hours 40 Exam Hours 3 Hrs										
CREDITS -3										

Course Learning Objectives: This course will enable students to:

- To have an insight into Fourier series, Fourier transforms, Laplace transforms, Difference equations and Z-transforms.
- To develop the proficiency in variational calculus and solving ODE's arising in engineering applications, using numerical methods.

Module 1	Contact
	Hours
Laplace Transform: Definition and Laplace transforms of elementary functions (statements	08
only). Laplace transforms of Periodic functions (statement only) and unit-step function –	
problems.	
Inverse Laplace Transform : Definition and problems, Convolution theorem to find the	
inverse Laplace transforms (without Proof) and problems. Solution of linear differential	
equations using Laplace transforms.	
RBT: L2, L3	
Module 2	
Fourier Series : Periodic functions, Dirichlet's condition. Fourier series of periodic functions	08
period 2π and arbitrary period. Half range Fourier series. Practical harmonic analysis.	
RBT: L1, L2	
Module 3	
Fourier Transforms: Infinite Fourier transforms, Fourier sine and cosine transforms.	08
Inverse Fourier transforms. Problems.	
Difference Equations and Z-Transforms: Difference equations, basic definition, z-	
transform-definition, Standard z-transforms, Damping and shifting rules, initial value and	
final value theorems (without proof) and problems, Inverse z-transformand applications to	
solve difference equations.	
•	
RBT: L1, L2	
Module 4	
Numerical Solutions of Ordinary Differential Equations(ODE's):	08
Numerical solution of ODE's of first order and first degree- Taylor's series method, Modified	
Euler's method. Runge - Kutta method of fourth order, Milne's and Adam-	
Bashforthpredictor and corrector method (No derivations of formulae)-Problems.	
RBT: L1, L2	
Module 5	
Numerical Solution of Second Order ODE's:Runge -Kutta method and Milne's predictor	08
and corrector method. (No derivations of formulae).	
Calculus of Variations: Variation of function and functional, variational problems, Euler's	

equation, Geodesics, hanging chain, problems.

RBT: L1, L2, L3

Course Outcomes: The student will be able to:

- Use Laplace transform and inverse Laplace transform in solving differential/ integral equation arising in network analysis, control systems and other fields of engineering.
- Demonstrate Fourier series to study the behaviour of periodic functions and their applications in system communications, digital signal processing and field theory.
- Make use of Fourier transform and Z-transform to illustrate discrete/continuous function arising in wave and heat propagation, signals and systems.
- Solve first and second order ordinary differential equations arising in engineering problems using single step and multistep numerical methods.
- Determine the extremals of functionals using calculus of variations and solve problems arising in dynamics of rigid bodies and vibrational analysis.

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

SEMESTER - III

Subject Code	18MATDIP31	CIE Marks	40
Number of Contact Hours/Week	2:1:0	SEE Marks	60
Total Number of Contact Hours	40	Exam Hours	3 Hrs

CREDITS - 00

Course Learning Objectives: This course will enable students to:

- To provide basic concepts of complex trigonometry, vector algebra, differential and integral calculus.
- To provide an insight into vector differentiation and first order ODE's.

Module 1	Contact Hours
Complex Trigonometry: Complex Numbers: Definitions and properties. Modulus and	08
amplitude of a complex number, Argand's diagram, De-Moivre's theorem (without proof).	
Vector Algebra: Scalar and vectors. Addition and subtraction and multiplication of vectors-	
Dot and Cross products, problems.	
RBT: L2, L2	
Module 2	
Differential Calculus: Review of successive differentiation-illustrative examples.	08
Maclaurin's series expansions-Illustrative examples. Partial Differentiation: Euler's theorem-	
problems on first order derivatives only. Total derivatives-differentiation of composite	
functions. Jacobians of order two-Problems.	
RBT: L1, L2	
Module 3	00
Vector Differentiation : Differentiation of vector functions. Velocity and acceleration of a	08
particle moving on a space curve. Scalar and vector point functions. Gradient, Divergence, Curl-simple problems. Solenoidal and irrotational vector fields-Problems.	
Curr-simple problems. Solenoldar and irrotational vector fields-Problems.	
RBT: L1, L2	
Module 4	
Integral Calculus : Review of elementary integral calculus. Reduction formulae for sin ⁿ x,	08
cos ⁿ x (with proof) and sin ^m xcos ⁿ x (without proof) and evaluation of these with standard	
limits-Examples. Double and triple integrals-Simple examples.	
RBT: L1, L2	
Module 5	
Ordinary differential equations (ODE's. Introduction-solutions of first order and first	08
degree differential equations: exact, linear differential equations. Equations reducible to exact	
and Bernoulli's equation.	
DDW 14 14	
RBT: L1, L2	
Comment Outcomes The state of the 11 to 11	

Course Outcomes: The student will be able to:

- Apply concepts of complex numbers and vector algebra to analyze the problems arising in related area.
- Use derivatives and partial derivatives to calculate rate of change of multivariate functions.
- Analyze position, velocity and acceleration in two and three dimensions of vector valued functions.
- Learn techniques of integration including the evaluation of double and triple integrals.

• Identify and solve first order ordinary differential equations.

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Textbooks:

- 1. E. Kreyszig, Advanced Engineering Mathematics, John Wiley & Sons, 10th Edition, 2016
- 2. N.P.Bali and Manish Goyal, A Text Book of Engineering Mathematics, Laxmi Publications, 6th Edition, 2014
- 3. RohitKhurana, Engineering Mathematics Vol.I, Cengage Learning, 1st Edition, 2015.

DATA STRUCTURES AND APPLICATIONS (Effective from the academic year 2018 -2019) SEMESTER – III Subject Code 18CS32 CIE Marks 40 Number of Contact Hours/Week 3:2:0 SEE Marks 60 Total Number of Contact Hours 50 Exam Hours 3 Hrs

CREDITS -4

Course Learning Objectives: This course will enable students to:

- Explain fundamentals of data structures and their applications essential for programming/problem solving.
- Illustrate linear representation of data structures: Stack, Queues, Lists, Trees and Graphs.
- Demonstrate sorting and searching algorithms.
- Find suitable data structure during application development/Problem Solving.

Module 1	Contact Hours
Introduction: Data Structures, Classifications (Primitive &Non Primitive), Data structure	10
Operations, Review of Arrays, Structures, Self-Referential Structures, and Unions. Pointers	10
and Dynamic Memory Allocation Functions. Representation of Linear Arrays in Memory,	
Dynamically allocated arrays.	
Array Operations : Traversing, inserting, deleting, searching, and sorting. Multidimensional Arrays, Polynomials and Sparse Matrices.	
Strings: Basic Terminology, Storing, Operations and Pattern Matching algorithms.	
Programming Examples.	
Textbook 1: Chapter 1: 1.2, Chapter 2: 2.2 - 2.7Text Textbook 2: Chapter 1: 1.1 - 1.4,	
Chapter 3: 3.1 - 3.3, 3.5, 3.7, Chapter 4: 4.1 - 4.9, 4.14Reference 3: Chapter 1: 1.4	
RBT: L1, L2, L3	
Module 2	
Stacks: Definition, Stack Operations, Array Representation of Stacks, Stacks using Dynamic	10
Arrays, Stack Applications: Polish notation, Infix to postfix conversion, evaluation of postfix	
expression.	
Recursion - Factorial, GCD, Fibonacci Sequence, Tower of Hanoi, Ackerman's function.	
Queues: Definition, Array Representation, Queue Operations, Circular Queues, Circular	
queues using Dynamic arrays, Dequeues, Priority Queues, A Mazing Problem. Multiple	
Stacks and Queues. Programming Examples.	
Textbook 1: Chapter 3: 3.1 -3.7Textbook 2: Chapter 6: 6.1 -6.3, 6.5, 6.7-6.10, 6.12, 6.13	
RBT: L1, L2, L3	
Module 3	
Linked Lists: Definition, Representation of linked lists in Memory, Memory allocation;	10
Garbage Collection. Linked list operations: Traversing, Searching, Insertion, and Deletion.	
Doubly Linked lists, Circular linked lists, and header linked lists. Linked Stacks and Queues.	
Applications of Linked lists – Polynomials, Sparse matrix representation. Programming	
Examples	
Textbook 1: Chapter 4: 4.1 – 4.6, 4.8, Textbook 2: Chapter 5: 5.1 – 5.10,	
RBT: L1, L2, L3	
Module 4	
Trees: Terminology, Binary Trees, Properties of Binary trees, Array and linked	10
Representation of Binary Trees, Binary Tree Traversals - Inorder, postorder, preorder;	
Additional Binary tree operations. Threaded binary trees, Binary Search Trees – Definition,	
Insertion, Deletion, Traversal, Searching, Application of Trees-Evaluation of Expression,	
Programming Examples	
Textbook 1: Chapter 5: 5.1 –5.5, 5.7; Textbook 2: Chapter 7: 7.1 – 7.9	
RBT: L1, L2, L3	
Module 5	
	10
Graphs: Definitions, Terminologies, Matrix and Adjacency List Representation Of Graphs,	10
Elementary Graph operations, Traversal methods: Breadth First Search and Depth First	

Search.

Sorting and Searching: Insertion Sort, Radix sort, Address Calculation Sort.

Hashing: Hash Table organizations, Hashing Functions, Static and Dynamic Hashing.

Files and Their Organization: Data Hierarchy, File Attributes, Text Files and Binary Files,

Basic File Operations, File Organizations and Indexing

Textbook 1: Chapter 6: 6.1 –6.2, Chapter 7:7.2, Chapter 8: 8.1-8.3

Textbook 2: Chapter 8: 8.1 – 8.7, Chapter 9: 9.1-9.3, 9.7, 9.9

Reference 2: Chapter 16: 16.1 - 16.7

RBT: L1, L2, L3

Course Outcomes: The student will be able to:

- Use different types of data structures, operations and algorithms
- Apply searching and sorting operations on files
- Use stack, Queue, Lists, Trees and Graphs in problem solving
- Implement all data structures in a high-level language for problem solving.

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Textbooks:

ANALOG AND DIGITAL ELECTRONICS (Effective from the academic year 2018 -2019) SEMESTER – III Subject Code 18CS33 CIE Marks 40 Number of Contact Hours/Week 3:0:0 SEE Marks 60 Total Number of Contact Hours 40 Exam Hours 3 Hrs

CREDITS -3

Course Learning Objectives: This course will enable students to:

- Explain the use of photoelectronics devices, 555 timer IC, Regulator ICs and uA741 opamap IC
- Make use of simplifying techniques in the design of combinational circuits.
- Illustrate combinational and sequential digital circuits
- Demonstrate the use of flipflops and apply for registers
- Design and test counters, Analog-to-Digital and Digital-to-Analog conversion techquiues.

Module 1	ContactHours
Photodiodes, Light Emitting Diodes and Optocouplers ,BJT Biasing :Fixed bias ,Collector to	08
base Bias , voltage divider bias, Operational Amplifier Application Circuits: Multivibrators	
using IC-555, Peak Detector, Schmitt trigger, Active Filters, Non-Linear Amplifier,	
Relaxation Oscillator, Current-to-Voltage and Voltage-to-Current Converter , Regulated	
Power Supply Parameters, adjustable voltage regulator, D to A and A to D converter.	
Text Book 1 :Part A:Chapter 2(Section 2.9,2.10,2.11), Chapter 4(Section 4.2,4.3,4.4), Chapter 7 (section (7.2,7.3.1,7.4,7.6 to 7.11), Chapter 8 (section (8.1,8.5), Chapter 9	
RBT: L1, L2	
Module 2	
Karnaugh maps: minimum forms of switching functions, two and three variable Karnaugh maps, four variable karnaugh maps, determination of minimum expressions using essential prime implicants, Quine-McClusky Method: determination of prime implicants, The prime implicant chart, petricks method, simplification of incompletely specified functions, simplification using map-entered variables	08
Text book 1:Part B: Chapter 5 (Sections 5.1 to 5.4) Chapter 6(Sections 6.1 to 6.5)	
RBT: L1, L2	
Module 3 Combinational circuit design and simulation using gates: Review of Combinational circuit design, design of circuits with limited Gate Fan-in ,Gate delays and Timing diagrams, Hazards in combinational Logic, simulation and testing of logic circuits	08
Multiplexers, Decoders and Programmable Logic Devices: Multiplexers, three state buffers, decoders and encoders, Programmable Logic devices, Programmable Logic Arrays, Programmable Array Logic.	
Text book 1:Part B: Chapter 8,Chapter 9 (Sections 9.1 to 9.6)	
RBT: L1, L2	
Module 4	
Introduction to VHDL: VHDL description of combinational circuits, VHDL Models for multiplexers, VHDL Modules.	08
Latches and Flip-Flops: Set Reset Latch, Gated Latches, Edge-Triggered D Flip Flop 3,SR Flip Flop, J K Flip Flop, T Flip Flop, Flip Flop with additional inputs, Asynchronous Sequential Circuits	

Text book 1:Part B: Chapter 10(Sections 10.1 to 10.3),Chapter 11 (Sections 11.1 to 11.9)	
RBT: L1, L2	
Module 5	
Registers and Counters: Registers and Register Transfers, Parallel Adder with accumulator, shift registers, design of Binary counters, counters for other sequences, counter design using SR and J K Flip Flops, sequential parity checker, state tables and graphs	08
Text book 1:Part B: Chapter 12(Sections 12.1 to 12.5), Chapter 13(Sections 13.1,13.3 RBT: L1, L2	

Course Outcomes: The student will be able to:

- Design and analyze application of analog circuits using photo devices, timer IC, power supply and regulator IC and op-amp.
- Explain the basic principles of A/D and D/A conversion circuits and develop the same.
- Simplify digital circuits using Karnaugh Map, and Quine-McClusky Methods
- Explain Gates and flip flops and make us in designing different data processing circuits, registers and counters and compare the types.
- Develop simple HDL programs

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Textbooks:

COMPUTER ORGANIZATION (Effective from the academic year 2018 -2019) SEMESTER – III **Subject Code** 18CS34 **CIE Marks** 40 **Number of Contact Hours/Week** 60 3:0:0 **SEE Marks Total Number of Contact Hours** 3 Hrs 40 **Exam Hours**

CREDITS -3

Course Learning Objectives: This course will enable students to:

- Explain the basic sub systems of a computer, their organization, structure and operation.
- Illustrate the concept of programs as sequences of machine instructions.
- Demonstrate different ways of communicating with I/O devices and standard I/O interfaces.
- Describe memory hierarchy and concept of virtual memory.
- Describe arithmetic and logical operations with integer and floating-point operands.
- Illustrate organization of a simple processor, pipelined processor and other computing systems

• Illustrate organization of a simple processor, pipelined processor and other computing	systems.
Module 1	ContactHours
Basic Structure of Computers: Basic Operational Concepts, Bus Structures, Performance –	08
Processor Clock, Basic Performance Equation, Clock Rate, Performance Measurement.	
Machine Instructions and Programs: Memory Location and Addresses, Memory	
Operations, Instructions and Instruction Sequencing, Addressing Modes, Assembly	
Language, Basic Input and Output Operations, Stacks and Queues, Subroutines, Additional	
Instructions, Encoding of Machine Instructions	
Text book 1: Chapter1 – 1.3, 1.4, 1.6 (1.6.1-1.6.4, 1.6.7), Chapter2 – 2.2 to 2.10	
RBT: L1, L2, L3	
Module 2	
Input/Output Organization: Accessing I/O Devices, Interrupts – Interrupt Hardware, Direct	08
Memory Access, Buses, Interface Circuits, Standard I/O Interfaces – PCI Bus, SCSI Bus,	
USB.	
Text book 1: Chapter4 – 4.1, 4.2, 4.4, 4.5, 4.6, 4.7	
RBT: L1, L2, L3	
Module 3	
Memory System: Basic Concepts, Semiconductor RAM Memories, Read Only Memories,	08
Speed, Size, and Cost, Cache Memories – Mapping Functions, Replacement Algorithms,	
Performance Considerations.	
Text book 1: Chapter5 – 5.1 to 5.4, 5.5(5.5.1, 5.5.2), 5.6	
RBT: L1, L2, L3	
Module 4	
Arithmetic: Numbers, Arithmetic Operations and Characters, Addition and Subtraction of	08
Signed Numbers, Design of Fast Adders, Multiplication of Positive Numbers, Signed	
Operand Multiplication, Fast Multiplication, Integer Division.	
Transfer and the state of the s	
Text book 1: Chapter2-2.1, Chapter6 – 6.1 to 6.6	
RBT: L1, L2, L3	
Module 5	
Basic Processing Unit: Some Fundamental Concepts, Execution of a Complete Instruction,	08
Multiple Bus Organization, Hard-wired Control, Micro programmed Control.	
Pipelining: Basic concepts of pipelining,	
Text book 1: Chapter7, Chapter8 – 8.1	
RBT: L1, L2, L3	

Course Outcomes: The student will be able to:

- Explain the basic organization of a computer system.
- Demonstrate functioning of different sub systems, such as processor, Input/output, and memory.
- Illustrate hardwired control and micro programmed control, pipelining, embedded and other computing systems.
- Design and analyse simple arithmetic and logical units.

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Textbooks:

1. Carl Hamacher, ZvonkoVranesic, SafwatZaky, Computer Organization, 5th Edition, Tata McGraw Hill, 2002. (Listed topics only from Chapters 1, 2, 4, 5, 6, 7, 8, 9 and 12)

Reference Books:

SOFTWARE ENGINEERING (Effective from the academic year 2018 -2019) SEMESTER – III			
Subject Code	18CS35	CIE Marks	40
Number of Contact Hours/Week	3:0:0	SEE Marks	60
Total Number of Contact Hours	40	Exam Hours	3 Hrs
CDEDITE 2			

CREDITS -3

Course Learning Objectives: This course will enable students to:

- Outline software engineering principles and activities involved in building large software programs. Identify ethical and professional issues and explain why they are of concern to software engineers.
- Explain the fundamentals of object oriented concepts
- Describe the process of requirements gathering, requirements classification, requirements specification and requirements validation. Differentiate system models, use UML diagrams and apply design patterns.
- Discuss the distinctions between validation testing and defect testing.
- Recognize the importance of software maintenance and describe the intricacies involved in software evolution. Apply estimation techniques, schedule project activities and compute pricing.
- Identify software quality parameters and quantify software using measurements and metrics. List software quality standards and outline the practices involved.

Module 1	Contact Hours
Introduction: Software Crisis, Need for Software Engineering. Professional Software Development, Software Engineering Ethics. Case Studies. Software Processes: Models: Waterfall Model (Sec 2.1.1), Incremental Model (Sec 2.1.2) and Spiral Model (Sec 2.1.3). Process activities. Requirements Engineering: Requirements Engineering Processes (Chap 4). Requirements Elicitation and Analysis (Sec 4.5). Functional and non-functional requirements (Sec 4.1). The software Requirements Document (Sec 4.2). Requirements Specification (Sec 4.3). Requirements validation (Sec 4.6). Requirements Management (Sec 4.7). RBT: L1, L2, L3	08
Module 2	
What is Object orientation? What is OO development? OO Themes; Evidence for usefulness of OO development; OO modelling history. Modelling as Design technique: Modelling; abstraction; The Three models. Introduction, Modelling Concepts and Class Modelling: What is Object orientation? What is OO development? OO Themes; Evidence for usefulness of OO development; OO modelling history. Modelling as Design technique: Modelling; abstraction; The Three models. Class Modelling: Object and Class Concept; Link and associations concepts; Generalization and Inheritance; A sample class model; Navigation of class models;	08
Textbook 2: Ch 1,2,3. RBT: L1, L2 L3	
Module 3	
System Models: Context models (Sec 5.1). Interaction models (Sec 5.2). Structural models (Sec 5.3). Behavioral models (Sec 5.4). Model-driven engineering (Sec 5.5). Design and Implementation: Introduction to RUP (Sec 2.4), Design Principles (Chap 17). Object-oriented design using the UML (Sec 7.1). Design patterns (Sec 7.2). Implementation issues (Sec 7.3). Open source development (Sec 7.4).	08
RBT: L1, L2, L3	
Module 4	
Software Testing: Development testing (Sec 8.1), Test-driven development (Sec 8.2),	08

Release testing (Sec 8.3)	, User testing (Sec	8.4). Test Automation	(Page no 42, 70,212,
231,444,695).			

Software Evolution: Evolution processes (**Sec 9.1**). Program evolution dynamics (**Sec 9.2**). Software maintenance (**Sec 9.3**). Legacy system management (**Sec 9.4**).

RBT: L1, L2, L3

Module 5

Project Planning: Software pricing (**Sec 23.1**). Plan-driven development (**Sec 23.2**). Project scheduling (**Sec 23.3**): Estimation techniques (**Sec 23.5**). **Quality management**: Software quality (**Sec 24.1**). Reviews and inspections (**Sec 24.3**). Software measurement and metrics (**Sec 24.4**). Software standards (**Sec 24.2**)

0

RBT: L1, L2, L3

Course Outcomes: The student will be able to:

- Design a software system, component, or process to meet desired needs within realistic constraints.
- Assess professional and ethical responsibility
- Function on multi-disciplinary teams
- Use the techniques, skills, and modern engineering tools necessary for engineering practice
- Analyze, design, implement, verify, validate, implement, apply, and maintain software systems or parts of software systems

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Textbooks:

- 1. Ian Sommerville: Software Engineering, 9th Edition, Pearson Education, 2012. (Listed topics only from Chapters 1,2,3,4, 5, 7, 8, 9, 23, and 24)

ANALOG AND DIGITAL ELECTRONICS LABORATORY

(Effective from the academic year 2018 -2019)

SEMESTER – III

Subject Code	18CSL37	CIE Marks	40
Number of Contact Hours/Week	0:2:2	SEE Marks	60
Total Number of Lab Contact Hours	36	Exam Hours	3 Hrs

CREDITS - 2

Course Learning Objectives: This course will enable students to:

This laboratory course enable students to get practical experience in design, assembly and evaluation/testing of

- Analog components and circuits including Operational Amplifier, Timer, etc.
- Combinational logic circuits.
- Flip Flops and their operations
- Counters and registers using flip-flops.
- Synchronous and Asynchronous sequential circuits.
- A/D and D/A converters

Descriptions (if any):

- Simulation packages preferred: Multisim, Modelsim, PSpice or any other relevant.
- For Part A (Analog Electronic Circuits) students must trace the wave form on Tracing sheet / Graph sheet and label trace.
- Continuous evaluation by the faculty must be carried by including performance of a student in both hardware implementation and simulation (if any) for the given circuit.
- A batch not exceeding 4 must be formed for conducting the experiment. For simulation individual student must execute the program.

Laboratory Programs:

PART A (Analog Electronic Circuits)

- Design an astablemultivibratorciruit for three cases of duty cycle (50%, <50% and >50%) using NE 555 timer IC. Simulate the same for any one duty cycle.
 Using ua 741 Opamp, design a 1 kHz Relaxation Oscillator with 50% duty cycle. And
- simulate the same.
- 3. Using ua 741 opamap, design a window comparate for any given UTP and LTP. And simulate the same.

PART B (Digital Electronic Circuits)

- 4. Design and implement Half adder, Full Adder, Half Subtractor, Full Subtractor using basic gates. And implement the same in HDL.
 - 5. Given a 4-variable logic expression, simplify it using appropriate technique and realize the simplified logic expression using 8:1 multiplexer IC. And implement the same in HDL.
 - 6. Realize a J-K Master / Slave Flip-Flop using NAND gates and verify its truth table. And implement the same in HDL.
 - 7. Design and implement code converter I)Binary to Gray (II) Gray to Binary Code using basic gates.
 - 8. Design and implement a mod-n (n<8) synchronous up counter using J-K Flip-Flop ICs and demonstrate its working.
 - 9. Design and implement an asynchronous counter using decade counter IC to count up from 0 to n (n<=9) and demonstrate on 7-segment display (using IC-7447)

Laboratory Outcomes: The student should be able to:

- Use appropriate design equations / methods to design the given circuit.
- Examine and verify the design of both analog and digital circuits using simulators.
- Make us of electronic components, ICs, instruments and tools for design and testing of circuits for the given the appropriate inputs.
- Compile a laboratory journal which includes; aim, tool/instruments/software/components used, design equations used and designs, schematics, program listing, procedure followed, relevant theory, results as graphs and tables, interpreting and concluding the findings.

Conduct of Practical Examination:

- Experiment distribution
 - For laboratories having only one part: Students are allowed to pick one experiment from the lot with equal opportunity.
 - o For laboratories having PART A and PART B: Students are allowed to pick one experiment from PART A and one experiment from PART B, with equal opportunity.
- Change of experiment is allowed only once and marks allotted for procedure to be made zero of the changed part only.
- Marks Distribution (Subjected to change in accoradance with university regulations)
 - a) For laboratories having only one part Procedure + Execution + Viva-Voce: 15+70+15 = 100 Marks
 - b) For laboratories having PART A and PART B
 - i. Part A Procedure + Execution + Viva = 6 + 28 + 6 = 40 Marks
 - ii. Part B Procedure + Execution + Viva = 9 + 42 + 9 = 60 Marks

DATA STRUCTURES LABORATORY (Effective from the academic year 2018 -2019) SEMESTER – III

Subject Code	18CSL38	CIE Marks	40
Number of Contact Hours/Week	0:2:2	SEE Marks	60
Total Number of Lab Contact Hours	36	Exam Hours	3 Hrs

CREDITS - 2

Course Learning Objectives: This course will enable students to:

This laboratory course enable students to get practical experience in design, develop, implement, analyze and evaluation/testing of

• Asymptotic performance of algorithms.

6.

- Linear data structures and their applications such as stacks, queues and lists
- Non-Linear data structures and their applications such as trees and graphs

	on-Linear data structures and their applications such as trees and graphs
	rting and searching algorithms
	ons (if any):
• Im	plement all the programs in 'C / C++'Programming Language and Linux / Windows as OS.
Programs	List:
1.	Design, Develop and Implement a menu driven Program in C for the following array
	operations.
	a. Creating an array of N Integer Elements
	b. Display of array Elements with Suitable Headings
	c. Inserting an Element (ELEM) at a given valid Position (POS)
	d. Deleting an Element at a given valid Position(POS)
	e. Exit.
	Support the program with functions for each of the above operations.
2.	Design, Develop and Implement a Program in C for the following operationson Strings.
	a. Read a main String (STR), a Pattern String (PAT) and a Replace String (REP)
	b. Perform Pattern Matching Operation: Find and Replace all occurrences of PAT in
	STR with REP if PAT exists in STR. Report suitable messages in case PAT does not
	exist in STR
	Support the program with functions for each of the above operations. Don't use Built-in
	functions.
3.	Design, Develop and Implement a menu driven Program in C for the following operations on
	STACK of Integers (Array Implementation of Stack with maximum size MAX)
	a. Push an Element on to Stack
	b. Pop an Element from Stack
	c. Demonstrate how Stack can be used to check Palindrome
	d. Demonstrate Overflow and Underflow situations on Stack
	e. Display the status of Stack
	f. Exit
	Support the program with appropriate functions for each of the above operations
4.	Design Develop and Implement a Program in C for converting an Infix Expression to Destfix
4.	Design, Develop and Implement a Program in C for converting an Infix Expression to Postfix Expression. Program should support for both parenthesized and free parenthesized
	expressions with the operators: +, -, *, /, %(Remainder), ^(Power) and alphanumeric
	operands.
	operands.
5.	Design, Develop and Implement a Program in C for the following Stack Applications
<i>J</i> .	a. Evaluation of Suffix expression with single digit operands and operators: +, -, *, /, %,
	α. Evaluation of Surffx expression with single digit operatios and operators. +, -, -, -, -, -, -, -, -, -, -, -, -, -,
	b. Solving Tower of Hanoi problem with n disks
	o. Solving Tower of Hanor problem with It thisks

Design, Develop and Implement a menu driven Program in C for the following operations on Circular QUEUE of Characters (Array Implementation of Queue with maximum size MAX)

a. Insert an Element on to Circular QUEUEb. Delete an Element from Circular QUEUE

- Demonstrate Overflow and Underflow situations on Circular QUEUE d. Display the status of Circular QUEUE Support the program with appropriate functions for each of the above operations 7. Design, Develop and Implement a menu driven Program in C for the following operations on Singly Linked List (SLL) of Student Data with the fields: USN, Name, Branch, Sem, PhNo a. Create a SLL of N Students Data by using front insertion. b. Display the status of SLL and count the number of nodes in it c. Perform Insertion / Deletion at End of SLL d. Perform Insertion / Deletion at Front of SLL(Demonstration of stack) e. Exit 8. Design, Develop and Implement a menu driven Program in C for the following operations on Doubly Linked List (DLL) of Employee Data with the fields: SSN, Name, Dept, Designation, Sal. PhNo a. Create a DLL of N Employees Data by using end insertion. b. Display the status of DLL and count the number of nodes in it c. Perform Insertion and Deletion at End of DLL d. Perform Insertion and Deletion at Front of DLL e. Demonstrate how this DLL can be used as Double Ended Queue. f. Exit Design, Develop and Implement a Program in C for the following operationson Singly 9. Circular Linked List (SCLL) with header nodes a. Represent and Evaluate a Polynomial $P(x,y,z) = 6x^2y^2z-4yz^5+3x^3yz+2xy^5z-2xyz^3$ b. Find the sum of two polynomials POLY1(x,y,z) and POLY2(x,y,z) and store the result in POLYSUM(x,y,z)Support the program with appropriate functions for each of the above operations 10. Design, Develop and Implement a menu driven Program in C for the following operations on Binary Search Tree (BST) of Integers. a. Create a BST of N Integers: 6, 9, 5, 2, 8, 15, 24, 14, 7, 8, 5, 2 b. Traverse the BST in Inorder, Preorder and Post Order c. Search the BST for a given element (KEY) and report the appropriate message 11. Design, Develop and Implement a Program in C for the following operations on Graph(G) of Cities a. Create a Graph of N cities using Adjacency Matrix. b. Print all the nodes reachable from a given starting node in a digraph using DFS/BFS 12. Given a File of N employee records with a set K of Keys(4-digit) which uniquely determine the records in file F. Assume that file F is maintained in memory by a Hash Table(HT) of m memory locations with L as the set of memory addresses (2-digit) of locations in HT. Let the keys in K and addresses in L are Integers. Design and develop a Program in C that uses Hash function H: $K \rightarrow L$ as $H(K)=K \mod m$ (remainder method), and implement hashing technique to map a given key K to the address space L. Resolve the collision (if any) using linear probing. Laboratory Outcomes: The student should be able to: Analyze and Compare various linear and non-linear data structures Code, debug and demonstrate the working nature of different types of data structures and their
 - Code, debug and demonstrate the working nature of different types of data structures and their applications
 - Implement, analyze and evaluate the searching and sorting algorithms
 - Choose the appropriate data structure for solving real world problems

Conduct of Practical Examination:

Experiment distribution

- For laboratories having only one part: Students are allowed to pick one experiment from the lot with equal opportunity.
- For laboratories having PART A and PART B: Students are allowed to pick one experiment from PART A and one experiment from PART B, with equal opportunity.
- Change of experiment is allowed only once and marks allotted for procedure to be made zero of the changed part only.
- Marks Distribution (Subjected to change in accoradance with university regulations)
 - c) For laboratories having only one part Procedure + Execution + Viva-Voce: 15+70+15 = 100 Marks
 - d) For laboratories having PART A and PART B
 - i. Part A Procedure + Execution + Viva = 6 + 28 + 6 = 40 Marks
 - ii. Part B Procedure + Execution + Viva = 9 + 42 + 9 = 60 Marks

COMPLEX ANALYSIS, PROBABILITY AND STATISTICAL METHODS (Effective from the academic year 2018 -2019)				
(Effective	SEMESTER –	•		
Subject Code	18MAT41	CIE Marks	40	
Number of Contact Hours/Week	2:2:0	SEE Marks	60	
Total Number of Contact Hours	40	Exam Hours	3 Hrs	
CREDITS -3				

Course Learning Objectives: This course will enable students to:

variables, expectation and covariance.

- To provide an insight into applications of complex variables, conformal mapping and special functions arising in potential theory, quantum mechanics, heat conduction and field theory.
- To develop probability distribution of discrete, continuous random variables and joint probability distribution occurring in digital signal processing, design engineering and microwave engineering.

Module 1	Contact
NIOUME 1	Hours
Calculus of complex functions: Review offunction of a complex variable, limits, continuity, and differentiability. Analytic functions: Cauchy-Riemann equations in cartesian and polar forms and consequences. Construction of analytic functions: Milne-Thomson method-Problems. RBT: L1, L2	08
Module 2	
Conformal transformations: Introduction. Discussion of transformations:	08
$w=z^2$, $w=e^z$, $w=z+\frac{1}{z}$, $(z \neq 0)$. Bilinear transformations- Problems. Complex integration: Line integral of a complex function-Cauchy's theorem and Cauchy's	
integral formula and problems. RBT: L1, L2	
Module 3	00
Probability Distributions: Review of basic probability theory. Random variables (discrete and continuous), probability mass/density functions. Binomial, Poisson, exponential and normal distributions- problems (No derivation for mean and standard deviation)-Illustrative examples.	08
RBT: L1, L2, L3	
Module 4	
Curve Fitting: Curve fitting by the method of least squares- fitting the curves of the form- $y = ax + b$, $y = ax^b$ & $y = ax^2 + bx + c$.	08
Statistical Methods: Correlation and regression-Karl Pearson's coefficient of correlation and	
rank correlation-problems. Regression analysis- lines of regression –problems.	
RBT: L1, L2, L3	
Module 5	
Joint probability distribution: Joint Probability distribution for two discrete random	08

Sampling Theory: Introduction to sampling distributions, standard error, Type-I and Type-II errors. Test of hypothesis for means, student's t-distribution, Chi-square distribution as a test of goodness of fit.

RBT:L2, L3, L4

Course Outcomes: The student will be able to:

- Use the concepts of analytic function and complex potentials to solve the problems arising in electromagnetic field theory.
- Utilize conformal transformation and complex integral arising in aerofoil theory, fluid flow visualization and image processing.
- Apply discrete and continuous probability distributions in analyzing the probability models arising in engineering field.
- Make use of the correlation and regression analysis to fit a suitable mathematical model for the statistical data.
- Construct joint probability distributions and demonstrate the validity of testing the hypothesis.

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

(A Bridge course for Lateral Entry students under Diploma quota to BE/B.Tech programmes) (Effective from the academic year 2018 -2019)

SEMESTER - IV

Subject Code	18MATDIP41	CIE Marks	40
Number of Contact Hours/Week	2:1:0	SEE Marks	60
Total Number of Contact Hours	40	Exam Hours	3 Hrs

CREDITS - 0

Course Learning Objectives: This course will enable students to:

- To provide essential concepts of linear algebra, second & higher order differential equations along with methods to solve them.
- To provide an insight into elementary probability theory and numerical methods.

Module 1	Contact Hours
Linear Algebra: Introduction - rank of matrix by elementary row operations - Echelon form. Consistency of system of linear equations - Gauss elimination method. Eigen values and eigen vectors of a square matrix. Problems.	08
RBT: L2, L2	
Module 2	
Numerical Methods: Finite differences. Interpolation/extrapolation using Newton's forward and backward difference formulae (Statements only)-problems. Solution of polynomial and transcendental equations — Newton-Raphson and Regula-Falsi methods (only formulae)- Illustrative examples. Numerical integration: Simpson's one third rule and Weddle's rule (without proof) Problems.	08
RBT: L1, L2, L3	
Module 3	
Higher order ODE's: Linear differential equations of second and higher order equations with constant coefficients. Homogeneous /non-homogeneous equations. Inverse differential operators. [Particular Integral restricted to $R(x) = e^{ax}$, $\sin ax /\cos ax$ for $f(D)y = R(x)$.]	08
RBT: L1, L2	
Module 4	
Partial Differential Equations(PDE's):- Formation of PDE's by elimination of arbitrary constants and functions. Solution of non-homogeneous PDE by direct integration. Homogeneous PDEs involving derivative with respect to one independent variable only.	08
RBT: L1, L2	
Module 5	
Probability: Introduction. Sample space and events. Axioms of probability. Addition & multiplication theorems. Conditional probability, Bayes's theorem, problems.	08
RBT: L1, L2	

Course Outcomes: The student will be able to :

- Solve systems of linear equations using matrix algebra.
- Apply the knowledge of numerical methods in modelling and solving engineering problems.
- Make use of analytical methods to solve higher order differential equations.
- Classify partial differential equations and solve them by exact methods.
- Apply elementary probability theory and solve related problems.

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

- 2. N.P.Bali and Manish Goyal, A Text Book of Engineering Mathematics, Laxmi Publications, 6th Edition, 2014
- 3. RohitKhurana, Engineering Mathematics Vol.I, Cengage Learning, 1st Edition, 2015.

DESIGN AND ANALYSIS OF ALGORITHMS (Effective from the academic year 2018 -2019) SEMESTER – IV **Subject Code** 18CS42 **CIE Marks** 40 **Number of Contact Hours/Week** 3:2:0 **SEE Marks** 60 Total Number of Contact Hours Exam Hours 3 Hrs 40 CREDITS -4 Course Learning Objectives: This course will enable students to: Explain various computational problem solving techniques. Apply appropriate method to solve a given problem. Describe various methods of algorithm analysis. Module 1 Contact Hours Introduction: What is an Algorithm? (T2:1.1), Algorithm Specification (T2:1.2), Analysis Framework (T1:2.1), Performance Analysis: Space complexity, Time complexity (T2:1.3). **Asymptotic Notations:** Big-Oh notation (O), Omega notation (Ω) , Theta notation (O), and Little-oh notation (o), Mathematical analysis of Non-Recursive and recursive Algorithms with Examples (T1:2.2, 2.3, 2.4).Important Problem Types: Sorting, Searching, String Graph Problems, Combinatorial Problems. **Fundamental** Structures: Stacks, Queues, Graphs, Trees, Sets and Dictionaries. (T1:1.3,1.4). **RBT: L1, L2, L3** Module 2 **Divide and Conquer**: General method, Binary search, Recurrence equation for divide and 8 conquer, Finding the maximum and minimum (T2:3.1, 3.3, 3.4), Merge sort, Quick sort (T1:4.1, 4.2), Strassen's matrix multiplication (T2:3.8), Advantages and Disadvantages of divide and conquer. Decrease and Conquer Approach: Topological Sort. (T1:5.3). RBT: L1, L2, L3 Module 3 Greedy Method: General method, Coin Change Problem, Knapsack Problem, Job 8 sequencing with deadlines (T2:4.1, 4.3, 4.5). Minimum cost spanning trees: Prim's Algorithm, Kruskal's Algorithm (T1:9.1, 9.2). Single source shortest paths: Dijkstra's Algorithm (T1:9.3). Optimal Tree problem: Huffman Trees and Codes (T1:9.4). Transform and Conquer Approach: Heaps and Heap Sort (T1:6.4). RBT: L1, L2, L3 Module 4

Dynamic Programming: General method with Examples, Multistage Graphs (**T2:5.1, 5.2**). **Transitive Closure:** Warshall's Algorithm, **All Pairs Shortest Paths:** Floyd's Algorithm, Optimal Binary Search Trees, Knapsack problem ((**T1:8.2, 8.3, 8.4**), Bellman-Ford Algorithm (**T2:5.4**), Travelling Sales Person problem (**T2:5.9**), Reliability design (**T2:5.8**).

RBT: L1, L2, L3

Module 5

Backtracking: General method (**T2:7.1**), N-Queens problem (**T1:12.1**), Sum of subsets problem (**T1:12.1**), Graph coloring(**T2:7.4**), Hamiltonian cycles (**T2:7.5**). **Branch and Bound:** Assignment Problem, Travelling Sales Person problem (**T1:12.2**), **0/1 Knapsack problem** (**T2:8.2**, **T1:12.2**): LC Branch and Bound solution (**T2:8.2**), FIFO Branch and Bound solution (**T2:8.2**). **NP-Complete and NP-Hard problems:** Basic concepts, non-deterministic algorithms, P, NP, NP-Complete, and NP-Hard classes (**T2:11.1**).

RBT: L1, L2, L3

Course Outcomes: The student will be able to :

- Describe computational solution to well known problems like searching, sorting etc.
- Estimate the computational complexity of different algorithms.

• Devise an algorithm using appropriate design strategies for problem solving.

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Textbooks:

- 1. Introduction to the Design and Analysis of Algorithms, AnanyLevitin:, 2rd Edition, 2009. Pearson.
- 2. Computer Algorithms/C++, Ellis Horowitz, SatrajSahni and Rajasekaran, 2nd Edition, 2014, Universities Press

- 1. Introduction to Algorithms, Thomas H. Cormen, Charles E. Leiserson, Ronal L. Rivest, Clifford Stein, 3rd Edition, PHI.
- 2. Design and Analysis of Algorithms, S. Sridhar, Oxford (Higher Education).

MICROCONTROLLER AND EMBEDDED SYSTEMS (Effective from the academic year 2018 -2019)				
	SEMESTER -	- IV		
Subject Code	18CS44	CIE Marks	40	
Number of Contact Hours/Week	3:0:0	SEE Marks	60	
Total Number of Contact Hours	40	Exam Hours	3 Hrs	
CREDITS -3				

Course Learning Objectives: This course will enable students to:

- Understand the fundamentals of ARM based systems, basic hardware components, selection methods and attributes of an embedded system.
- Program ARM controller using the various instructions
- Identify the applicability of the embedded system
- Comprehend the real time operating system used for the embedded system

Module 1	Contact Hours
Microprocessors versus Microcontrollers, ARM Embedded Systems: The RISC design philosophy, The ARM Design Philosophy, Embedded System Hardware, Embedded System Software.	08
ARM Processor Fundamentals: Registers, Current Program Status Register, Pipeline, Exceptions, Interrupts, and the Vector Table , Core Extensions	
Text book 1: Chapter 1 - 1.1 to 1.4, Chapter 2 - 2.1 to 2.5	
RBT: L1, L2	
Module 2	
Introduction to the ARM Instruction Set: Data Processing Instructions, Branch Instructions, Software Interrupt Instructions, Program Status Register Instructions, Coprocessor Instructions, Loading Constants	08
ARM programming using Assembly language: Writing Assembly code, Profiling and cycle counting, instruction scheduling, Register Allocation, Conditional Execution, Looping Constructs	
Text book 1: Chapter 3:Sections 3.1 to 3.6 (Excluding 3.5.2), Chapter 6(Sections 6.1 to 6.6) RBT: L1, L2	
Module 3	
Embedded System Components: Embedded Vs General computing system, History of embedded systems, Classification of Embedded systems, Major applications areas of embedded systems, purpose of embedded systems	08
Core of an Embedded System including all types of processor/controller, Memory, Sensors, Actuators, LED, 7 segment LED display, stepper motor, Keyboard, Push button switch, Communication Interface (onboard and external types), Embedded firmware, Other system components.	
Text book 2: Chapter 1(Sections 1.2 to 1.6), Chapter 2(Sections 2.1 to 2.6)	
RBT: L1, L2	
Module 4	
Embedded System Design Concepts: Characteristics and Quality Attributes of Embedded	08
Systems, Operational quality attributes ,non-operational quality attributes, Embedded	
Systems-Application and Domain specific, Hardware Software Co-Design and Program	
Modelling, embedded firmware design and development	
Text book 2: Chapter-3, Chapter-4, Chapter-7 (Sections 7.1, 7.2 only), Chapter-9	

(Sections 9.1, 9.2, 9.3.1, 9.3.2 only)

RBT: L1, L2

Module 5

RTOS and IDE for Embedded System Design: Operating System basics, Types of operating systems, Task, process and threads (Only POSIX Threads with an example program), Thread preemption, Multiprocessing and Multitasking, Task Communication (without any program), Task synchronization issues – Racing and Deadlock, Concept of Binary and counting semaphores (Mutex example without any program), How to choose an RTOS, Integration and testing of Embedded hardware and firmware, Embedded system Development Environment – Block diagram (excluding Keil), Disassembler/decompiler, simulator, emulator and debugging techniques, target hardware debugging, boundary scan.

Text book 2: Chapter-10 (Sections 10.1, 10.2, 10.3, 10.4, 10.7, 10.8.1.1, 10.8.1.2, 10.8.2.2, 10.10 only), Chapter 12, Chapter-13 (block diagram before 13.1, 13.3, 13.4, 13.5, 13.6 only)

RBT: L1, L2

Course Outcomes: The student will be able to:

- Describe the architectural features and instructions of ARM microcontroller
- Apply the knowledge gained for Programming ARM for different applications.
- Interface external devices and I/O with ARM microcontroller.
- Interpret the basic hardware components and their selection method based on the characteristics and attributes of an embedded system.
- Develop the hardware /software co-design and firmware design approaches.
- Demonstrate the need of real time operating system for embedded system applications

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Textbooks:

classes; Sources of events; Event listener interfaces; Using the delegation event model;

Swings: Swings: The origins of Swing; Two key Swing features; Components and Containers; The Swing Packages; A simple Swing Application; Create a Swing Applet; Jlabel and ImageIcon; JTextField; The Swing Buttons; JTabbedpane; JScrollPane; JList;

Adapter classes; Inner classes.

JComboBox; JTable.

Text book 2: Ch 22: Ch: 29 Ch: 30

RBT: L1, L2, L3

Course Outcomes: The student will be able to:

- Explain the object-oriented concepts and JAVA.
- Develop computer programs to solve real world problems in Java.
- Develop simple GUI interfaces for a computer program to interact with users, and to understand the event-based GUI handling principles using swings.

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Textbooks:

Mandatory Note: Every institute shall organize bridge course on C++, either in the vacation or in the beginning of even semester for a minimum period of ten days (2hrs/day). Maintain a copy of the report for verification during LIC visit.

Faculty can utilize open source tools to make teaching and learning more interactive.

DATA COMMUNICATION (Effective from the academic year 2018 -2019) SEMESTER – IV **Subject Code** 18CS46 **CIE Marks** 40 **Number of Contact Hours/Week** 60 3:0:0 **SEE Marks Total Number of Contact Hours** 40 **Exam Hours** 3 Hrs CREDITS -3

Course Learning Objectives: This course will enable students to:

- Comprehend the transmission technique of digital data between two or more computers and a computer network that allows computers to exchange data.
- Explain with the basics of data communication and various types of computer networks;
- Demonstrate Medium Access Control protocols for reliable and noisy channels.
- Expose wireless and wired LANs.

Textbook1: Ch 13.1 to 13.5, 15.1 to 15.3, 16.2

RBT: L1, L2

Course Outcomes: The student will be able to:

- Explain the various components of data communication.
- Explain the fundamentals of digital communication and switching.
- Compare and contrast data link layer protocols.
- Summarize IEEE 802.xx standards

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

The elements can enerator. Demonstrate	e time taken to sort. be read from a file using Java how the

average case and best case.

5.	Sort a given set of n integer elements using Merge Sort method and compute its time complexity. Run the program for varied values of $n > 5000$, and record the time taken to sort. Plot a graph of the time taken versus n on graph sheet. The elements can be read from a file or can be generated using the random number generator. Demonstrate using Java how the divide-and-conquer method works along with its time complexity analysis: worst case, average case and best case.
6.	Implement in Java, the 0/1 Knapsack problem using (a) Dynamic Programming method (b) Greedy method.
7.	From a given vertex in a weighted connected graph, find shortest paths to other vertices using Dijkstra's algorithm . Write the program in Java.
8.	Find Minimum Cost Spanning Tree of a given connected undirected graph using Kruskal'salgorithm. Use Union-Find algorithms in your program
9.	Find Minimum Cost Spanning Tree of a given connected undirected graph using Prim's algorithm .
10.	Write Java programs to (a) Implement All-Pairs Shortest Paths problem using Floyd's algorithm. (b) Implement Travelling Sales Person problem using Dynamic programming.
11.	Design and implement in Java to find a subset of a given set $S = \{S_1, S_2,,S_n\}$ of n positive integers whose SUM is equal to a given positive integer d . For example, if $S = \{1, 2, 5, 6, 8\}$ and $d = 9$, there are two solutions $\{1,2,6\}$ and $\{1,8\}$. Display a suitable message, if the given problem instance doesn't have a solution.
12.	Design and implement in Java to find all Hamiltonian Cycles in a connected undirected Graph G of <i>n</i> vertices using backtracking principle.

Laboratory Outcomes: The student should be able to:

- Design algorithms using appropriate design techniques (brute-force, greedy, dynamic programming, etc.)
- Implement a variety of algorithms such assorting, graph related, combinatorial, etc., in a high level language.
- Analyze and compare the performance of algorithms using language features.
- Apply and implement learned algorithm design techniques and data structures to solve real-world problems.

Conduct of Practical Examination:

- Experiment distribution
 - o For laboratories having only one part: Students are allowed to pick one experiment from the lot with equal opportunity.
 - For laboratories having PART A and PART B: Students are allowed to pick one experiment from PART A and one experiment from PART B, with equal opportunity.
- Change of experiment is allowed only once and marks allotted for procedure to be made zero of the changed part only.
- Marks Distribution (Subjected to change in accoradance with university regulations)
 - e) For laboratories having only one part Procedure + Execution + Viva-Voce: 15+70+15 = 100 Marks
 - f) For laboratories having PART A and PART B
 - i. Part A Procedure + Execution + Viva = 6 + 28 + 6 = 40 Marks
 - ii. Part B Procedure + Execution + Viva = 9 + 42 + 9 = 60 Marks

Course Learning Objectives: This course will enable students to:

- Develop and test Program using ARM7TDMI/LPC2148
- Conduct the experiments on an ARM7TDMI/LPC2148 evaluation board using evaluation version of Embedded 'C' &Keil Uvision-4 tool/compiler.

Descriptions (if any):

Programs List:

PART A Conduct the following experiments by writing program using ARM7TDMI/LPC2148 using an evaluation board/simulator and the required software tool.

- Write a program to multiply two 16 bit binary numbers.
 Write a program to find the sum of first 10 integer numbers.
- 2. Write a program to find the sum of first to integer numb
- 3. Write a program to find factorial of a number.
- 4. Write a program to add an array of 16 bit numbers and store the 32 bit result in internal RAM
- 5. Write a program to find the square of a number (1 to 10) using look-up table.
- Write a program to find the largest/smallest number in an array of 32 numbers.
 Write a program to arrange a series of 32 bit numbers in ascending/descending order.
- 8. Write a program to count the number of ones and zeros in two consecutive memory locations.

PART –**B** Conduct the following experiments on an ARM7TDMI/LPC2148 evaluation board using evaluation version of Embedded 'C' &Keil Uvision-4 tool/compiler.

- 9. Display "Hello World" message using Internal UART.
- 10. Interface and Control a DC Motor.
- 11. Interface a Stepper motor and rotate it in clockwise and anti-clockwise direction.
- 12. Determine Digital output for a given Analog input using Internal ADC of ARM controller.
- 13. Interface a DAC and generate Triangular and Square waveforms.
- 14. Interface a 4x4 keyboard and display the key code on an LCD.
- 15. Demonstrate the use of an external interrupt to toggle an LED On/Off.
- Display the Hex digits 0 to F on a 7-segment LED interface, with an appropriate delay in between

Laboratory Outcomes: The student should be able to:

- Develop and test program using ARM7TDMI/LPC2148
- Conduct the following experiments on an ARM7TDMI/LPC2148 evaluation board using evaluation version of Embedded 'C' &Keil Uvision-4 tool/compiler.

Conduct of Practical Examination:

- Experiment distribution
 - o For laboratories having only one part: Students are allowed to pick one experiment from the lot with equal opportunity.
 - o For laboratories having PART A and PART B: Students are allowed to pick one experiment from PART A and one experiment from PART B, with equal opportunity.
- Change of experiment is allowed only once and marks allotted for procedure to be made zero of the changed part only.
- Marks Distribution (Subjected to change in accoradance with university regulations)
 - g) For laboratories having only one part Procedure + Execution + Viva-Voce: 15+70+15 = 100 Marks
 - h) For laboratories having PART A and PART B
 - i. Part A Procedure + Execution + Viva = 6 + 28 + 6 = 40 Marks
 - ii. Part B Procedure + Execution + Viva = 9 + 42 + 9 = 60 Marks

Course Learning Objectives: This course will enable students to:

- Learn the syntax and semantics of Python programming language.
- Illustrate the process of structuring the data using lists, tuples and dictionaries.
- Demonstrate the use of built-in functions to navigate the file system.
- Implement the Object Oriented Programming concepts in Python.

 Appraise the need for working with various documents like Excel, PDF, Word and Oth 	iers.
Module – 1	Contact
	Hours
Python Basics , Entering Expressions into the Interactive Shell, The Integer, Floating-Point,	10
and String Data Types, String Concatenation and Replication, Storing Values in Variables,	
Your First Program, Dissecting Your Program, Flow control, Boolean Values, Comparison	
Operators, Boolean Operators, Mixing Boolean and Comparison Operators, Elements of Flow	
Control, Program Execution, Flow Control Statements, Importing Modules, Ending a	
Program Early with sys.exit(), Functions , def Statements with Parameters, Return Values and	
return Statements, The None Value, Keyword Arguments and print(), Local and Global	
Scope, The global Statement, Exception Handling, A Short Program: Guess the Number	
Textbook 1: Chapters 1 – 3	
RBT: L1, L2	
Module – 2	
Lists, The List Data Type, Working with Lists, Augmented Assignment Operators, Methods,	10
Example Program: Magic 8 Ball with a List, List-like Types: Strings and Tuples, References,	
Dictionaries and Structuring Data, The Dictionary Data Type, Pretty Printing, Using Data	
Structures to Model Real-World Things, Manipulating Strings, Working with Strings,	
Useful String Methods, Project: Password Locker, Project: Adding Bullets to Wiki Markup	

Textbook 1: Chapters 4 – 6

RBT: L1, L2, L3

Module – 3

Pattern Matching with Regular Expressions, Finding Patterns of Text Without Regular Expressions, Finding Patterns of Text with Regular Expressions, More Pattern Matching with Regular Expressions, Greedy and Nongreedy Matching, The findall() Method, Character Classes, Making Your Own Character Classes, The Caret and Dollar Sign Characters, The Wildcard Character, Review of Regex Symbols, Case-Insensitive Matching, Substituting Strings with the sub() Method, Managing Complex Regexes, Combining re .IGNORECASE, re .DOTALL, and re .VERBOSE, Project: Phone Number and Email Address Extractor, Reading and Writing Files, Files and File Paths, The os.path Module, The File Reading/Writing Process, Saving Variables with the shelve Module, Saving Variables with the pprint.pformat() Function, Project: Generating Random Quiz Files, Project: Multiclipboard.

Textbook 1: Chapters 7 – 10

RBT: L1, L2, L3

Module – 4

Classes and objects, Programmer-defined types, Attributes, Rectangles, Instances as return values, Objects are mutable, Copying, Classes and functions, Time, Pure functions, Modifiers, Prototyping versus planning, Classes and methods, Object-oriented features, Printing objects, Another example, A more complicated example, Theinit method, The _str_ method, Operator overloading, Type-based dispatch, Polymorphism, Interface and implementation, Inheritance, Card objects, Class attributes, Comparing cards, Decks, Printing the deck, Add, remove, shuffle and sort, Inheritance, Class diagrams, Data encapsulation

10

Textbook 2: Chapters 15 – 18

RBT: L1, L2, L3

Module - 5

Web Scraping, Project: MAPIT.PY with the webbrowser Module, Downloading Files from the Web with the requests Module, Saving Downloaded Files to the Hard Drive, HTML, Parsing HTML with the BeautifulSoup Module, Project: "I'm Feeling Lucky" Google Search, Project: Downloading All XKCD Comics, Controlling the Browser with the selenium Module, Working with Excel Spreadsheets, Excel Documents, Installing the openpyxl Module, Reading Excel Documents, Project: Reading Data from a Spreadsheet, Writing Excel Documents, Project: Updating a Spreadsheet, Setting the Font Style of Cells, Font Objects, Formulas, Adjusting Rows and Columns, Charts, Working with PDF and Word Documents, PDF Documents, Project: Combining Select Pages from Many PDFs, Word Documents, Working with CSV files and JSON data, The csv Module, Project: Removing the Header from CSV Files, JSON and APIs, The json Module, Project: Fetching Current Weather Data

Textbook 1: Chapters 11 – 14

RBT: L1, L2, L3

Course Outcomes: After studying this course, students will be able to

- Demonstrate proficiency in handling of loops and creation of functions.
- Identify the methods to create and manipulate lists, tuples and dictionaries.
- Discover the commonly used operations involving regular expressions and file system.
- Interpret the concepts of Object-Oriented Programming as used in Python.
- Determine the need for scraping websites and working with CSV, JSON and other file formats.

Ouestion paper pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Course Learning Objectives: This co	ourse will enable stu	idents to:	

- Provide a strong foundation in database concepts, technology, and practice.
- Practice SQL programming through a variety of database problems.
- Demonstrate the use of concurrency and transactions in database
- Design and build database applications for real world problems.

Module 1	Contact Hours
Introduction to Databases: Introduction, Characteristics of database approach, Advantages of using the DBMS approach, History of database applications. Overview of Database Languages and Architectures: Data Models, Schemas, and Instances. Three schema architecture and data independence, database languages, and interfaces, The Database System environment. Conceptual Data Modelling using Entities and Relationships: Entity types, Entity sets, attributes, roles, and structural constraints, Weak entity types, ER diagrams, examples, Specialization and Generalization. Textbook 1:Ch 1.1 to 1.8, 2.1 to 2.6, 3.1 to 3.10 RBT: L1, L2, L3	10
Module 2	10
Relational Model: Relational Model Concepts, Relational Model Constraints and relational database schemas, Update operations, transactions, and dealing with constraint violations. Relational Algebra: Unary and Binary relational operations, additional relational operations (aggregate, grouping, etc.) Examples of Queries in relational algebra. Mapping Conceptual Design into a Logical Design: Relational Database Design using ER-to-Relational mapping. SQL: SQL data definition and data types, specifying constraints in SQL, retrieval queries in SQL, INSERT, DELETE, and UPDATE statements in SQL, Additional features of SQL. Textbook 1: Ch4.1 to 4.5, 5.1 to 5.3, 6.1 to 6.5, 8.1; Textbook 2: 3.5 RBT: L1, L2, L3	10
Module 3	10
SQL : Advances Queries: More complex SQL retrieval queries, Specifying constraints as assertions and action triggers, Views in SQL, Schema change statements in SQL. Database Application Development: Accessing databases from applications, An introduction to JDBC, JDBC classes and interfaces, SQLJ, Stored procedures, Case study: The internet Bookshop. Internet Applications: The three-Tier application architecture, The presentation layer, The Middle Tier Textbook 1: Ch7.1 to 7.4; Textbook 2: 6.1 to 6.6, 7.5 to 7.7. RBT: L1, L2, L3	10
Module 4	
Normalization: Database Design Theory – Introduction to Normalization using Functional and Multivalued Dependencies: Informal design guidelines for relation schema, Functional Dependencies, Normal Forms based on Primary Keys, Second and Third Normal Forms, Boyce-Codd Normal Form, Multivalued Dependency and Fourth Normal Form, Join Dependencies and Fifth Normal Form. Normalization Algorithms: Inference Rules, Equivalence, and Minimal Cover, Properties of Relational Decompositions, Algorithms for Relational Database Schema Design, Nulls, Dangling tuples, and alternate Relational Designs, Further discussion of Multivalued dependencies and 4NF, Other dependencies and Normal Forms Textbook 1: Ch14.1 to 14.7, 15.1 to 15.6	10

RBT: L1, L2, L3	ĺ
Module 5	
Transaction Processing: Introduction to Transaction Processing, Transaction and System	10
concepts, Desirable properties of Transactions, Characterizing schedules based on	I
recoverability, Characterizing schedules based on Serializability, Transaction support in	I
SQL. Concurrency Control in Databases: Two-phase locking techniques for	ı
Concurrency control, Concurrency control based on Timestamp ordering, Multiversion	ı
Concurrency control techniques, Validation Concurrency control techniques, Granularity	I
of Data items and Multiple Granularity Locking. Introduction to Database Recovery	I
Protocols: Recovery Concepts, NO-UNDO/REDO recovery based on Deferred update,	I
Recovery techniques based on immediate update, Shadow paging, Database backup and	I
recovery from catastrophic failures	I
Textbook 1: 20.1 to 20.6, 21.1 to 21.7, 22.1 to 22.4, 22.7.	1
RBT: L1, L2, L3	1

Course Outcomes: The student will be able to:

- Identify, analyze and define database objects, enforce integrity constraints on a database using RDBMS.
- Use Structured Query Language (SQL) for database manipulation.
- Design and build simple database systems
- Develop application to interact with databases.

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Textbook 1: Appendix: G.1(only), J.1 & J.2

RBT: L1, L2, L3

Course Outcomes: The student will be able to:

- Acquire fundamental understanding of the core concepts in automata theory and Theory of Computation
- Learn how to translate between different models of Computation (e.g., Deterministic and Non-deterministic and Software models).
- Design Grammars and Automata (recognizers) for different language classes and become knowledgeable about restricted models of Computation (Regular, Context Free) and their relative powers.
- Develop skills in formal reasoning and reduction of a problem to a formal model, with an emphasis on semantic precision and conciseness.
- Classify a problem with respect to different models of Computation.

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Textbooks:

- 1. Elaine Rich, Automata, Computability and Complexity, 1st Edition, Pearson education, 2012/2013
- 2. K L P Mishra, N Chandrasekaran, 3rd Edition, Theory of Computer Science, PhI, 2012.

Reference Books:

		C			
	Chapter 7 and 8 (8.1 to 8.4)	ctare Lo verses fraditio	ina system		

Course outcomes: The students should be able to:

- Apply the knowledge of Artificial Intelligence to write simple algorithm for agents.
- Apply the AI knowledge to solve problem on search algorithm.
- Develop knowledge base sentences using propositional logic and first order logic.
- Apply first order logic to solve knowledge engineering process.

Question Paper Pattern:

RBT: L1, L2

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

ARTIFICIAL INTELLIGENCE LABORATORY (Effective from the academic year 2018 -2019) SEMESTER - V **Subject Code** 18AIL57 **CIE Marks** 40 Number of Contact Hours/Week 0:2:2 **SEE Marks** 60 **Total Number of Lab Contact Hours Exam Hours** 3 Hrs Credits - 2**Course Learning Objectives:** This course will enable students to: Implement and evaluate AI algorithms in Python programming language. **Descriptions (if any):** Installation procedure of the required software must be demonstrated, carried out in groups and documented in the journal. **Programs List:** Practicing Problems in Python(Students can be encouraged to practice good number of practice problems, some practice problems are listed here) (a) Write a python program to print the multiplication table for the given number 1. (b) Write a python program to check whether the given number is prime or not? (c) Write a python program to find factorial of the given number? 2. (a) Write a python program to implement List operations (Nested List,

keys(),values(),items() A I Problems to be implemented in Python

string(s1) occurs in another string(s2)

3.

4.

AI Prob	lems to be implemented in Python
1	Implement and Demonstrate Depth First Search Algorithm on Water Jug Problem
2	Implement and Demonstrate Best First Search Algorithm on any AI problem
3	Implement AO* Search algorithm.
4	Solve 8-Queens Problem with suitable assumptions
5	Implementation of TSP using heuristic approach
6	Implementation of the problem solving strategies: either using Forward Chaining or
	Backward Chaining
7	Implement resolution principle on FOPL related problems
8	Implement any Game and demonstrate the Game playing strategies

Length, Concatenation, Membership, Iteration, Indexing and Slicing)

Write a python program to Illustrate Different Set Operations

(b) Write a python program to implement List methods (Add, Append, Extend & Delete). Write a python program to implement simple Chatbot with minimum 10 conversations

(a)Write a python program to implement a function that counts the number of times a

(b)Write a program to illustrate Dictionary operations([],in,traversal)and methods:

Laboratory Outcomes: The student should be able to:

- Implement and demonstrate AI algorithms.
- Evaluate different algorithms.

Conduct of Practical Examination:

- Experiment distribution
 - For laboratories having only one part: Students are allowed to pick one experiment from the lot with equal opportunity.
 - For laboratories having PART A and PART B: Students are allowed to pick one experiment from PART A and one experiment from PART B, with equal opportunity.
- Change of experiment is allowed only once and marks allotted for procedure to be made zero of the changed part only.
- Marks Distribution (Subjected to change in accordance with university regulations)
 - i) For laboratories having only one part Procedure + Execution + Viva-Voce: 15+70+15 = 100 Marks
 - j) For laboratories having PART A and PART B
 - i. Part A Procedure + Execution + Viva = 6 + 28 + 6 = 40 Marks
 - ii. Part B Procedure + Execution + Viva = 9 + 42 + 9 = 60 Marks

DBMS LABORATORY WITH MINI PROJECT (Effective from the academic year 2018 -2019)

SEMESTER – V			
	18CSL58	CIE Marks	

40 **Subject Code Number of Contact Hours/Week** 0:2:2 **SEE Marks** 60 **Total Number of Lab Contact Hours** 3 Hrs **Exam Hours**

Credits – 2

Course Learning Objectives: This course will enable students to:

- Foundation knowledge in database concepts, technology and practice to groom students into well-informed database application developers.
- Strong practice in SQL programming through a variety of database problems.
- Develop database applications using front-end tools and back-end DBMS.

Descriptions (if any):

PART-A: SOL Programming ()

- Design, develop, and implement the specified queries for the following problems using Oracle, MySQL, MS SQL Server, or any other DBMS under LINUX/Windows environment.
- Create Schema and insert at least 5 records for each table. Add appropriate database constraints.

PART-B: Mini Project ()

Use Java, C#, PHP, Python, or any other similar front-end tool. All applications must be demonstrated on desktop/laptop as a stand-alone or web based application (Mobile apps on Android/IOS are not permitted.)

Installation procedure of the required software must be demonstrated, carried out in groups and documented in the journal.

Programs List:

PART A

1. Consider the following schema for a Library Database:

BOOK(Book_id, Title, Publisher_Name, Pub_Year)

BOOK AUTHORS(Book id, Author Name)

PUBLISHER(Name, Address, Phone)

BOOK_COPIES(Book id, Branch id, No-of_Copies)

BOOK_LENDING(Book id, Branch id, Card No, Date_Out, Due_Date)

LIBRARY_BRANCH(Branch_id, Branch_Name, Address)

Write SQL queries to

- 1. Retrieve details of all books in the library id, title, name of publisher, authors, number of copies in each branch, etc.
- 2. Get the particulars of borrowers who have borrowed more than 3 books, but from Jan 2017 to Jun 2017.
- 3. Delete a book in BOOK table. Update the contents of other tables to reflect this data manipulation operation.
- 4. Partition the BOOK table based on year of publication. Demonstrate its working with a simple query.
- 5. Create a view of all books and its number of copies that are currently available in the Library.
- Consider the following schema for Order Database: 2.

SALESMAN(Salesman id, Name, City, Commission)

CUSTOMER(Customer_id, Cust_Name, City, Grade, Salesman_id)

ORDERS(Ord_No, Purchase_Amt, Ord_Date, Customer_id, Salesman id)

Write SOL queries to

- 1. Count the customers with grades above Bangalore's average.
- 2. Find the name and numbers of all salesman who had more than one customer.
- 3. List all the salesman and indicate those who have and don't have customers in their cities (Use UNION operation.)
- 4. Create a view that finds the salesman who has the customer with the highest order

	of a day.				
	5. Demonstrate the DELETE operation by removing salesman with id 1000. All				
	his orders must also be deleted.				
3.	Consider the schema for Movie Database:				
	ACTOR(Act_id, Act_Name, Act_Gender)				
	DIRECTOR(<u>Dir_id</u> , Dir_Name, Dir_Phone)				
	MOVIES(Mov_id, Mov_Title, Mov_Year, Mov_Lang, Dir_id)				
	MOVIE_CAST(<u>Act_id</u> , <u>Mov_id</u> , Role) RATING(<u>Mov_id</u> , Rev_Stars)				
	Write SQL queries to				
	1. List the titles of all movies directed by 'Hitchcock'.				
	2. Find the movie names where one or more actors acted in two or more movies.				
	3. List all actors who acted in a movie before 2000 and also in a movie after 2015				
	(use JOIN operation).				
	4. Find the title of movies and number of stars for each movie that has at least one				
	rating and find the highest number of stars that movie received. Sort the result by				
	movie title.				
4	5. Update rating of all movies directed by 'Steven Spielberg' to 5.				
4.	Consider the schema for College Database:				
	STUDENT(<u>USN</u> , SName, Address, Phone, Gender)				
	SEMSEC(<u>SSID</u> , Sem, Sec) CLASS(<u>USN</u> , SSID)				
	SUBJECT(Subcode, Title, Sem, Credits)				
	IAMARKS(<u>USN</u> , <u>Subcode</u> , <u>SSID</u> , Test1, Test2, Test3, FinalIA)				
	Write SQL queries to				
	1. List all the student details studying in fourth semester 'C' section.				
	2. Compute the total number of male and female students in each semester and in				
	each section.				
	3. Create a view of Test1 marks of student USN '1BI15CS101' in all subjects.				
	4. Calculate the FinalIA (average of best two test marks) and update the				
	corresponding table for all students. 5. Categorize students based on the following criterion:				
	If FinalIA = 17 to 20 then CAT = 'Outstanding'				
	If FinalIA = 12 to 16 then CAT = 'Average'				
	If FinalIA < 12 then CAT = 'Weak'				
	Give these details only for 8 th semester A, B, and C section students.				
5.	Consider the schema for Company Database:				
	EMPLOYEE(<u>SSN</u> , Name, Address, Sex, Salary, SuperSSN, DNo)				
	DEPARTMENT(<u>DNo</u> , DName, MgrSSN, MgrStartDate)				
	DLOCATION(<u>DNo,DLoc</u>) PROJECT(DNo, DNovo, DI costion, DNo)				
	PROJECT(<u>PNo</u> , PName, PLocation, DNo) WORKS_ON(<u>SSN</u> , <u>PNo</u> , Hours)				
	Write SQL queries to				
	1. Make a list of all project numbers for projects that involve an employee whose				
	last name is 'Scott', either as a worker or as a manager of the department that				
	controls the project.				
	2. Show the resulting salaries if every employee working on the 'IoT' project is				
	given a 10 percent raise.				
	3. Find the sum of the salaries of all employees of the 'Accounts' department, as				
	well as the maximum salary, the minimum salary, and the average salary in this				
	department A Patriava the name of each ampleyee who works on all the projects controlled by				
	4. Retrieve the name of each employee who works on all the projects controlledby				
	department number 5 (use NOT EXISTS operator).5. For each department that has more than five employees, retrieve the department				
	number and the number of its employees who are making more than Rs.				
	6,00,000.				
	PART B: Mini Project				
	TAKI D. Dimitioject				

• For any problem selected make sure that the application should have five or more tables indicative areas include; health care, salary management, office automation, etc.

Laboratory Outcomes: The student should be able to:

- Create, Update and query on the database.
- Demonstrate the working of different concepts of DBMS
- Implement, analyze and evaluate the project developed for an application.

Conduct of Practical Examination:

- Experiment distribution
 - o For laboratories having only one part: Students are allowed to pick one experiment from the lot with equal opportunity.
 - o For laboratories having PART A and PART B: Students are allowed to pick one experiment from PART A and one experiment from PART B, with equal opportunity.
- Change of experiment is allowed only once and marks allotted for procedure to be made zero of the changed part only.
- Marks Distribution (Subjected to change in accoradance with university regulations)
 - k) For laboratories having only one part Procedure + Execution + Viva-Voce: 15+70+15 = 100 Marks
 - 1) For laboratories having PART A and PART B
 - i. Part A Procedure + Execution + Viva = 6 + 28 + 6 = 40 Marks
 - ii. Part B Procedure + Execution + Viva = 9 + 42 + 9 = 60 Marks

MACHINE LEARNING (Effective from the academic year 2018 -2019) SEMESTER – VI			
Subject Code	18AI61	CIE Marks	40
Number of Contact Hours/Week	3:2:0	SEE Marks	60
Total Number of Contact Hours	50	Exam Hours	3 Hrs
CREDITS – 04			

Course Learning Objectives: This course will enable students to:

Course outcomes: The students should be able to:

- Define machine learning and understand the basic theory underlying machine learning.
- Differentiate supervised, unsupervised and reinforcement learning
- Understand the basic concepts of learning and decision trees.
- Understand Bayesian techniques for problems appear in machine learning
- Perform statistical analysis of machine learning techniques.

Module – 1	CH
Introduction:	10
Machine learning Landscape: what is ML?, Why, Types of ML, main challenges of ML (T2:Chapter1)	
Concept learning and Learning Problems – Designing Learning systems, Perspectives and Issues –	
Concept Learning - Find S-Version Spaces and Candidate Elimination Algorithm -Remarks on VS-	
Inductive bias –	
T2: Chapter 1	
T1:Chapter 1 and 2)	
Module – 2	
End to end Machine learning Project :	10
Working with real data, Look at the big picture, Get the data, Discover and visualize the data,	
Prepare the data, select and train the model, Fine tune your model	
Classification: MNIST, training a Binary classifier, performance measure, multiclass	
classification, error analysis, multi label classification, multi output classification	
(T2: Chapter 2 and 3)	
Module – 3	
Training Models: Linear regression, gradient descent, polynomial regression, learning curves,	10
regularized linear models, logistic regression	
Support Vector Machine: linear, Nonlinear, SVM regression and under the hood	
(T2: Chapter 4 and 5)	
RBT: L1, L2	
Module – 4	
Decision Trees	10
Training and Visualizing DT, making prediction, estimating class, the CART training,	
computational complexity, GINI impurity, Entropy, regularization Hyper parameters, Regression,	
instability	
Ensemble learning and Random Forest:	
Voting classifiers, Bagging and pasting, Random patches, Random forests, Boosting, stacking	
(T2: Chapter 6 and 7)	
RBT: L1, L2	
Module – 5	
Bayes Theorem - Concept Learning - Maximum Likelihood - Minimum Description Length	10
Principle - Bayes Optimal Classifier - Gibbs Algorithm - Naïve Bayes Classifier - example-	
Bayesian Belief Network – EM Algorithm	
Text book (T1: Chapter 6)	
RBT: L1, L2	

- Choose the learning techniques with this basic knowledge.
- Apply effectively ML algorithms for appropriate applications.
- Apply bayesian techniques and derive effectively learning rules.

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Textbooks:

- 1. Tom M. Mitchell, Machine Learning, McGraw-Hill Education, 2013
- 2. AurelienGeron, Hands-on Machine Learning with Scikit-Learn & TensorFlow, O'Reilly, Shroff Publishers and Distributors pvt.Ltd 2019

- 1. EthemAlpaydin, Introduction to Machine Learning, PHI Learning Pvt. Ltd, 2nd Ed., 2013
- 2. T. Hastie, R. Tibshirani, J. H. Friedman, The Elements of Statistical Learning, Springer, 1st edition, 2001
- 3. Machine Learning using Python ,Manaranjan Pradhan, U Dinesh kumar, Wiley, 2019
- 4. Machine Learning, SaikatDutt, Subramanian Chandramouli, Amit Kumar Das, Pearson, 2020

DIGITAL IMAGE PROCESSING (Effective from the academic year 2018 -2019) SEMESTER – VI				
Subject Code	18AI62	CIE Marks	40	
Number of Contact Hours/Week	3:2:0	SEE Marks	60	
Total Number of Contact Hours	50	Exam Hours	03	

CREDITS –4

- **Course Learning Objectives:** This course will enable students to:
- Understand the fundamentals of digital image processing
- Understand the image transform used in digital image processing
- Understand the image enhancement techniques used in digital image processing
- Understand the image restoration techniques and methods used in digital image processing

 Understand the Morphological Operations and Segmentation used in digital image processing

 Understand the Morphological Operations and Segmentation used in digital image processing 	ng
Module-1	Contact Hours.
Digital Image Fundamentals : What is Digital Image Processing?, Originsof Digital Image Processing, Examples of fields that use DIP, FundamentalSteps in Digital Image Processing, Components of an Image ProcessingSystem, Elements of Visual Perception, Image Sensing and Acquisition, Image Sampling and Quantization, Some Basic Relationships betweenPixels, Linear and Nonlinear Operations.	10
[Text1: Chapter 1 and Chapter 2: Sections 2.1 to 2.5, 2.6.2]	
RBT: L1,L2	
Module-2	
Spatial Domain: Some Basic Intensity Transformation Functions, Histogram Processing, Fundamentals of Spatial Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters Frequency Domain: Preliminary Concepts, The Discrete Fourier Transform (DFT) of Two Variables, Properties of the 2-D DFT, Filtering in the Frequency Domain, Image Smoothing and Image Sharpening Using Frequency Domain Filters, and Selective Filtering. [Text1: Chapter 3: Sections 3.2 to 3.6 and Chapter 4: Sections 4.2, 4.5 to 4.10]	10
RBT: L1,L2, L3	
Module-3	
Restoration: Noise models, Restoration in the Presence of Noise Onlyusing Spatial Filtering and Frequency Domain Filtering, Linear, Position-Invariant Degradations, Estimating the Degradation Function, InverseFiltering, Minimum Mean Square Error (Wiener) Filtering, and ConstrainedLeast Squares Filtering.	10
[Text1: Chapter 5: Sections 5.2, to 5.9]	
RBT: L1,L2, L3	
Module-4	
Color Image Processing: Color Fundamentals, Color Models, and Pseudo-colorImage Processing.	10
Wavelets: Background, Multiresolution Expansions.	10
Morphological Image Processing: Preliminaries, Erosion and Dilation, Opening and Closing,	

The Hit-or-Miss Transforms, and Some BasicMorphological Algorithms.	
[Text1: Chapter 6: Sections 6.1 to 6.3, Chapter 7: Sections 7.1 and 7.2, Chapter 9: Sections 9.1 to 9.5]	
RBT: L1,L2, L3	
Module-5	
Segmentation : Introduction, classification of image segmentation algorithms, Detection of Discontinuities, Edge Detection, Hough Transforms and Shape Detection, Corner Detection, and Principles of Thresholding.	10
Representation and Description: Representation, and Boundary descriptors.	
[Text2: Chapter 9: Sections 9.1, to 9.7 and Text 1: Chapter 11: Sections 11.1and 11.2]	
RBT: L1,L2, L3	

Course Outcomes: At the end of the course students should be able to:

- Understand, Ascertain and describe the basics of image processing concepts through mathematical interpretation.
- Apply image processing techniques in both the spatial and frequency (Fourier)domains.
- Demonstrate image restoration process and its respective filters required.
- Design image analysis techniques in the form of image segmentation and toevaluate the Methodologies for segmentation.
- Conduct independent study and analysis of Image Enhancement techniques.

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Textbooks:

- 1. Rafael C. Gonzalez and Richard E. Woods, Digital Image Processing, Third Ed., Prentice Hall, 2008.
- 2. S. Sridhar, Digital Image Processing, Oxford University Press, 2ndEdition, 2016.

- 1. Digital Image Processing- S.Jayaraman, S.Esakkirajan, T.Veerakumar, TataMcGraw Hill 2014.
- 2. Fundamentals of Digital Image Processing-A. K. Jain, Pearson 2004.

JAVA FOR MOBILE APPLICATIONS (Effective from the academic year 2018 -2019) SEMESTER – VI				
Subject Code	18AI63	CIE Marks	40	
Number of Contact Hours/Week	3:2:0	SEE Marks	60	
Total Number of Contact Hours	50	Exam Hours	3 Hrs	

CREDITS –4

Course Learning Objectives: This course will enable students to:

- To have an insight into enumerations and collection frameworks for storing and processing data.
- To understand the architecture and components of android application.
- To design interactive user interface.
- To work with SQLite database

Module 1	Contact Hours
Enumerations, Autoboxing and Annotations(metadata): Enumerations, Enumeration fundamentals, the values () and valueOf() Methods, java enumerations are class types, enumerations Inherits Enum, example, type wrappers, Autoboxing, Autoboxing and Methods, Autoboxing/Unboxing occurs in Expressions, Autoboxing/Unboxing, Boolean and character values, Autoboxing/Unboxing helps prevent errors, A word of Warning. Annotations, Annotation basics, specifying retention policy, Obtaining Annotations at run time by use of reflection, Annotated element Interface, Using Default values, Marker Annotations, Single Member annotations, Built-In annotations. RBT: L2, L3	10
Module 2	
The collections and Framework: Collections Overview, Recent Changes to Collections, The Collection Interfaces, The Collection Classes, accessing a collection Via an Iterator, Storing User Defined Classes in Collections, The Random Access Interface, Working with Maps, Comparators, The Collection Algorithms, Why Generic Collections? The legacy Classes and Interfaces, Parting Thoughts on Collections RBT: L1, L2	10
Module 3	
String Handling: The String Constructors, String Length, Special String Operations, String Literals, String Concatenation, String Concatenation with Other Data Types, String Conversion and toString() Character Extraction, charAt(), getChars(), getBytes() toCharArray(), String Comparison, equals() and equalsIgnoreCase(), regionMatches() startsWith() and endsWith(), equals() Versus ==, compareTo() Searching Strings, Modifying a String, substring(), concat(), replace(), trim(), Data Conversion Using valueOf(), Changing the Case of Characters Within a String, Additional String Methods, StringBuffer, StringBuffer Constructors, length() and capacity(), ensureCapacity(), setLength(), charAt() and setCharAt(), getChars(),append(), insert(), reverse(), delete() and deleteCharAt(), replace(), substring(), Additional StringBuffer Methods, StringBuilder Text Book 1: Ch 15	10
Module 4	
Getting Started with Android Programming: What is Android? Features of Android, Android Architecture, obtaining the required tools, launching your first android application Activities, Fragments and Intents: Understanding activities, linking activities using intents, fragments. Text Book 3: Ch 1, 3	10

RBT: L1, L2, L3	
Module 5	
Getting to know the Android User Interface: Views and ViewGroups, FrameLayout, LinearLayout, TableLayout, RelativeLayout, ScrollView Designing User Interface with Views: TextView view – Button, ImageButton, EditText, Checkbox, ToggleButton, RadioButton and RadioGroupViews. Creating and using Databases: Creating the DBAdapter Helper class, using the database programmatically. Text Book 3: Ch 4.1, 5.1, 7.3 RBT: L1, L2, L3	10

Course Outcomes: The student will be able to:

- Interpret the need for advanced Java concepts like enumerations and collections in developing modular and efficient programs
- Understand various application components in android.
- Design efficient user interface using different layouts.
- Develop application with persistent data storage using SQLite

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Textbooks:

- 1. Herbert Schildt: JAVA the Complete Reference, 7th/9th Edition, Tata McGraw Hill, 2007.
- 2.Jim Keogh: J2EE-TheCompleteReference, McGraw Hill, 2007

T1: Chapter 32

RBT: L1, L2

Module – 3

Estimation for Software Project: Observations On Estimation, The Project Planning Process, SoftwareScope And Feasibility, Resources – Human Resources, Reusable Software Resources, EnvironmentalResources, Software Project Estimation, Decomposition Techniques – Software Sizing, Problem BasedEstimation, An Example Of LOC Based Estimation, An Example Of FP – Based Estimation, Process-BasedEstimation, An Example Of Process- Based Estimation, Estimation With Usecases, An Example Of EstimationUsing Use Case Points, Reconciling Estimates, Empirical Estimation Models – The Structure Of EstimationModels, The COCOMO II Model, The Software Equation.

T1: Chapter 33

RBT: L1, L2

Module-4

Project Scheduling: Basic concepts, Project Scheduling – Basic Principles - The Relationship BetweenPeople and Effort – Effort Distribution, defining a Task Set for The Software Project – a Task Set Example –Refinement of Major Tasks, defining a Task Network, Scheduling – Timeline Charts – Tracking the Schedule–Tracking Progress for an OO Project.

T1: Chapter 34

RBT: L1, L2

Module - 5

Software Quality: What is Quality? Software Quality – Garvin's Quality Dimensions, McColl"sQualityFactors, ISO 9126 Quality Factors, Targeted Quality Factors, The Transition to a Quantitative View, TheSoftware Quality Dilemma - "Good Enough" Software, The Cost Of Quality, Risks, Negligence and Liability,Quality and Security, The Impact Of Management Actions, Achieving Software Quality – SoftwareEngineering Methods, Project Management Techniques, Quality Control, Quality Assurance.

08

T1: Chapter 19 RBT: L1, L2

Course outcomes: The students should be able to:

- Describe the basics of software project management concepts, principles and practices.
- Apply the different metrics and techniques to measure a software project.
- Apply software cost estimation models.
- Apply scheduling techniques to software project.
- Discuss the software quality concepts and good practices.

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

CREDITS -4

Course Learning Objectives: This course will enable students to:

- Illustrate the Semantic Structure of HTML and CSS
- Compose forms and tables using HTML and CSS
- Design Client-Side programs using JavaScript and Server-Side programs using PHP
- Infer Object Oriented Programming capabilities of PHP
- Examine JavaScript frameworks such as jQuery and Backbone

Module 1	Contact Hours
Introduction to HTML, What is HTML and Where did it come from?, HTML Syntax, Semantic Markup, Structure of HTML Documents, Quick Tour of HTML Elements, HTML5 Semantic Structure Elements, Introduction to CSS, What is CSS, CSS Syntax, Location of Styles, Selectors, The Cascade: How Styles Interact, The Box Model, CSS Text Styling.	8
Textbook 1: Ch. 2, 3 RBT: L1, L2, L3	
Module 2	
HTML Tables and Forms, Introducing Tables, Styling Tables, Introducing Forms, Form Control Elements, Table and Form Accessibility, Microformats, Advanced CSS: Layout, Normal Flow, Positioning Elements, Floating Elements, Constructing Multicolumn Layouts, Approaches to CSS Layout, Responsive Design, CSS Frameworks. Textbook 1: Ch. 4,5	8
RBT: L1, L2, L3	
JavaScript: Client-Side Scripting, What is JavaScript and What can it do?, JavaScript Design Principles, Where does JavaScript Go?, Syntax, JavaScript Objects, The Document Object Model (DOM), JavaScript Events, Forms, Introduction to Server-Side Development with PHP, What is Server-Side Development, A Web Server's Responsibilities, Quick Tour of PHP, Program Control, Functions Textbook 1: Ch. 6, 8	8
RBT: L1, L2, L3	
Module 4	
PHP Arrays and Superglobals, Arrays, \$_GET and \$_POST Superglobal Arrays, \$_SERVER Array, \$_Files Array, Reading/Writing Files, PHP Classes and Objects, Object-Oriented Overview, Classes and Objects in PHP, Object Oriented Design, Error Handling and Validation, What are Errors and Exceptions?, PHP Error Reporting, PHP Error and Exception Handling	8
Textbook 1: Ch. 9, 10	
RBT: L1, L2, L3	
Module 5	
Managing State, The Problem of State in Web Applications, Passing Information via Query Strings, Passing Information via the URL Path, Cookies, Serialization, Session State, HTML5 Web Storage, Caching, Advanced JavaScript and jQuery, JavaScript Pseudo-Classes, jQuery Foundations, AJAX, Asynchronous File Transmission, Animation, Backbone MVC Frameworks, XML Processing and Web Services, XML Processing, JSON, Overview of Web Services. Textbook 1: Ch. 13, 15,17	8
RBT: L1, L2, L3	
Course Outcomes: The student will be able to:	l

- Adapt HTML and CSS syntax and semantics to build web pages.
- Construct and visually format tables and forms using HTML and CSS
- Develop Client-Side Scripts using JavaScript and Server-Side Scripts using PHP to generate and display the contents dynamically.
- Appraise the principles of object oriented development using PHP
- Inspect JavaScript frameworks like jQuery and Backbone which facilitates developer to focus on core features.

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Textbooks:

Mandatory Note:

Distribution of CIE Marks is a follows (Total 40 Marks):

- 20 Marks through IA Tests
- 20 Marks through practical assessment

Maintain a copy of the report for verification during LIC visit.

FOUNDATION FOR DATA SCIENCE (Effective from the academic year 2018 -2019)				
SEMESTER – VI				
Subject Code	18AI644	CIE Marks	40	
Number of Contact Hours/Week	3:0:0	SEE Marks	60	
Total Number of Contact Hours	40	Exam Hours	3 Hrs	
CREDITS - 03				

Course Learning Objectives: This course will enable students to:

- Understand the knowledge of mathematics to explain the concept of data science
- Design Decision tree to predict the class for a given data
- Analyze the given data set, and solve a problem by performing Classification using the basics of mathematics and data science
- Develop solutions to group entities in data set and apply it for the given real-world data using the basic knowledge of similarity, neighbors and clustering

Module – 1	СН
Introduction: Data-Analytic Thinking: The Ubiquity of Data Opportunities, Example: Hurricane Frances, Example: Predicting Customer Churn. Data Science, Engineering, and Data-Driven Decision Making, Data Processing and —Big Data, Data and Data Science Capability as a Strategic Asset, Data-Analytic Thinking. Business Problems and Data Science Solutions: From Business Problems to Data Mining Tasks, Supervised Versus Unsupervised Methods, Data Mining and Its Results, The Data Mining Process, Business Understanding, Data Understanding, Data Preparation, Modeling, Evaluation, Deployment, Other Analytics Techniques and Technologies: Statistics, Database Querying, Data Warehousing, Regression Analysis, Machine Learning and Data Mining	08
Text Book 1: Chapter 1, Chapter 2 RBT: L1, L2	
Module – 2	
Introduction to Predictive Modeling: From Correlation to Supervised Segmentation Models, Induction, and Prediction, Supervised Segmentation, Selecting Informative Attributes Example: Attribute Selection with Information Gain, Supervised Segmentation with Tree- Structured Models, Visualizing Segmentations, Trees as Sets of Rules, Probability Estimation, Example: Addressing the Churn Problem with Tree Induction.	08
Text Book 1: Chapter 3 RBT: L1, L2	
Module – 3	•
Fitting a Model to Data: Classification via Mathematical Functions: Linear Discriminant Functions, Optimizing an Objective Function, An Example of Mining a Linear Discriminant from Data, Linear Discriminant Functions for Scoring and Ranking Instances, Support Vector Machines briefly, Regression via Mathematical Functions, Class Probability Estimation and Logistic —Regression I. Logistic Regression: Some Technical Details. Example: Logistic Regression versus Tree Induction, Non-Linear Functions, Support vector machines and Neural Networks OverfittingandIts Avoidance: Fundamental Concepts, Exemplary Techniques, Regularization, Genaralization, Overfitting, Overfitting Examined	08
Text Book 1: Chapter 4, Chapter 5 RBT: L1, L2, L3	
Module – 4	
Similarity, Neighbors, and Clusters: Similarity and Distance, Nearest-Neighbor Reasoning, Example: Whiskey Analytics, Nearest Neighbors for Predictive Modeling, How Many Neighbors and How Much Influence? Geometric Interpretation, Overfitting, and Complexity Control. Issues with Nearest-Neighbor Methods. Some important Technical Details Relating to Similarities and neighbors. Clustering, Example: Whiskey Analytics Revisited, Hierarchical Clustering, Nearest Neighbors Revisited: Clustering Around Centroids. Understanding the Results of Clustering	08
Text Book 1: Chapter 6 RBT: L1, L2,L3	
Module – 5	
Decision Analytic Thinking I: What is a Good Model? Evaluating Classifiers Plain Accuracyand its Problems, The confusion matrix, Problems with unbalanced Classes, Problems with Unequal Costs and Benefits. Representing and Mining Text: Why Text Is Important? Why Text Is Difficult? Representation, Bag of Words, Term Frequency, Measuring Sparseness: Inverse Document Frequency, Combining Them: TFIDF, Example: Jazz Musicians	08

Other Data Science Tasks and Techniques: Co-occurrences and Associations: Finding Items That Go Together, Measuring Surprise: Lift and Leverage, Example: Beer and Lottery Tickets, Associations Among Facebook Likes, Profiling: Finding Typical Behavior, Link Prediction and Social Recommendation.

Text Book 1: Chapter 7, Chapter 10, Chapter 12 RBT: L1, L2, L3

Course outcomes: The students should be able to:

- **Apply** the knowledge of mathematics to explain the concept of data science, the available techniques in data science and its scope in business
- **Develop** a Decision tree based on supervised segmentation and predict the class for a given data set by selecting (through solving) the attribute for segmentation using the available techniques.
- Analyze the given data set, and solve a problem by performing Classification using the basics of mathematics and data science
- **Develop** solutions to group entities in data set and **apply** it for the given real-world data using the basic **knowledge** of similarity, neighbors and clustering
- Analyze the importance of mining text (social data) and formulate the association rules based on market basket analysis

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

INTRODUCTION TO DATA SRUCTURES AND ALGORITHM (OPEN ELECTIVE)

(Effective from the academic year 2018 -2019)

SEMESTER - VI

Subject Code	18CS652	CIE Marks	40
Number of Contact Hours/Week	3:0:0	SEE Marks	60
Total Number of Contact Hours	40	Exam Hours	3 Hrs

CREDITS -3

Course Learning Objectives: This course will enable students to:

- Identify different data structures in C programming language
- Appraise the use of data structures in problem solving
- Implement data structures using C programming language.

Module 1	Contact
	Hours
Introduction to C, constants, variables, data types, input output operations, operators and	08
expressions, control statements, arrays, strings, built-in functions, user defined functions,	
structures, unions and pointers	
Text Book 1: Chapter 1 and 2	
RBT: L1, L2	
Module 2	
Algorithms, Asymptotic notations, Introduction to data structures, Types of data structures,	08
Arrays.	
Text Book 1: Chapter 3 and 4	
RBT: L1, L2	
Module 3	
Linked lists, Stacks	08
Text Book 1: Chapter 5 and 6	
RBT: L1, L2	
Module 4	
Queues, Trees	08
Text Book 1: Chapter 7 and 8	
RBT: L1, L2	
Module 5	
Graphs, Sorting, (selection, insertion, bubble, quick) and searching(Linear, Binary, Hash)	08
Text Book 1: Chapter 9 and 10	
RBT: L1, L2	

Course Outcomes: The student will be able to:

- Identify different data structures in C programming language
- Appraise the use of data structures in problem solving
- Implement data structures using C programming language.

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

PROGRAMMING IN JAVA (OPEN ELECTIVE)

(Effective from the academic year 2018 -2019)

SEMESTER - VI

DENTED TER VI			
Subject Code	18CS653	CIE Marks	40
Number of Contact Hours/Week	3:0:0	SEE Marks	60
Total Number of Contact Hours	40	Exam Hours	3 Hrs

CREDITS -3

Course Learning Objectives: This course will enable students to:

- Learn fundamental features of object oriented language and JAVA
- Set up Java JDK environment to create, debug and run simple Java programs.
- Learn object oriented concepts using programming examples.
- Study the concepts of importing of packages and exception handling mechanism.
- Discuss the String Handling examples with Object Oriented concepts

Module – 1	C
	H
An Overview of Java: Object-Oriented Programming, A First Simple Program, A Second Short Program,	08
Two Control Statements, Using Blocks of Code, Lexical Issues, The Java Class Libraries, Data Types,	
Variables, and Arrays: Java Is a Strongly Typed Language, The Primitive Types, Integers, Floating-Point	
Types, Characters, Booleans, A Closer Look at Literals, Variables, Type Conversion and Casting,	
Automatic Type Promotion in Expressions, Arrays, A Few Words About Strings	
Text book 1: Ch 2, Ch 3	
RBT: L1, L2	
Module – 2	
Operators: Arithmetic Operators, The Bitwise Operators, Relational Operators, Boolean Logical Operators,	08
The Assignment Operator, The ? Operator, Operator Precedence, Using Parentheses, Control Statements:	

Java's Selection Statements, Iteration Statements, Jump Statements. **Text book 1: Ch 4, Ch 5**

RBT: L1, L2

Module – 3

Introducing Classes: Class Fundamentals, Declaring Objects, Assigning Object Reference Variables, Introducing Methods, Constructors, The this Keyword, Garbage Collection, The finalize() Method, A Stack Class, A Closer Look at Methods and Classes: Overloading Methods, Using Objects as Parameters, A Closer Look at Argument Passing, Returning Objects, Recursion, Introducing Access Control, Understanding static, Introducing final, Arrays Revisited, Inheritance: Inheritance, Using super, Creating a Multilevel Hierarchy, When Constructors Are Called, Method Overriding, Dynamic Method Dispatch, Using Abstract Classes, Using final with Inheritance, The Object Class.

Text book 1: Ch 6, Ch 7.1-7.9, Ch 8.

RBT: L1, L2

Module – 4

Packages and Interfaces: Packages, Access Protection, Importing Packages, Interfaces, Exception Handling: Exception-Handling Fundamentals, Exception Types, Uncaught Exceptions, Using try and catch, Multiple catch Clauses, Nested try Statements, throw, throws, finally, Java's Built-in Exceptions, Creating Your Own Exception Subclasses, Chained Exceptions, Using Exceptions.

Text book 1: Ch 9, Ch 10

RBT: L1, L2

Module - 5

Enumerations, Type Wrappers, I/O, Applets, and Other Topics: I/O Basics, Reading Console Input, Writing Console Output, The PrintWriter Class, Reading and Writing Files, Applet Fundamentals, The transient and volatile Modifiers, Using instanceof, strictfp, Native Methods, Using assert, Static Import, Invoking Overloaded Constructors Through this(), String Handling: The String Constructors, String Length, Special String Operations, Character Extraction, String Comparison, Searching Strings, Modifying a String, Data Conversion Using valueOf(), Changing the Case of Characters Within a String, Additional String Methods, StringBuffer, StringBuilder.

Text book 1: Ch 12.1,12.2, Ch 13, Ch 15 RBT: L1, L2

Course outcomes: The students should be able to:

- Explain the object-oriented concepts and JAVA.
- Develop computer programs to solve real world problems in Java.

Develop simple GUI interfaces for a computer program to interact with users

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Herbert Schildt, Java The Complete Reference, 7th Edition, Tata McGraw Hill, 2007. (Chapters 2, 3, 4, 5, 6,7, 8, 9,10, 12,13,15)

- 2. Raoul-Gabriel Urma, Mario Fusco, Alan Mycroft, "Java 8 in Action", Dreamtech Press/Manning Press, 1st Edition, 2014.

INTRODUCTION TO OPERATING SYSTEM (OPEN ELECTIVE)

(Effective from the academic year 2018 -2019)

SEV	TESTER	-VI
אועוכו	אנו ו כעוו	— v I

Subject Code	18CS654	CIE Marks	40	
Number of Contact Hours/Week	3:0:0	SEE Marks	60	
Total Number of Contact Hours	40	Exam Hours	3 Hrs	
CREDITS _3				

Course Learning Objectives: This course will enable students to:

- Explain the fundamentals of operating system
- Comprehend multithreaded programming, process management, memory management and storage management.

Familier with various types of operating systems	
Module – 1	СН
Introduction: What OS do, Computer system organization, architecture, structure, Operations,	08
Process, memory and storage management, Protection and security, Distributed systems, Special	
purpose systems, computing environments.	
System Structure: OS Services, User OSI, System calls, Types of system calls, System programs,	
OS design and implementation, OS structure, Virtual machines, OS generation, system boot	
Textbook1: Chapter 1, 2	
RBT: L1, L2	
Module – 2	
Process Concept: Overview, Process scheduling, Operations on process, IPC, Examples in IPC,	08
Communication in client-server systems.	
DATES TO STATE OF THE STATE OF	

Multithreaded Programming: Overview, Models, Libraries, Issues, OS Examples

Textbook1: Chapter 3,4

RBT: L1, L2

Module – 3

Process Scheduling: Basic concept, Scheduling criteria, Algorithm, multiple processor scheduling, thread scheduling, OS Examples, Algorithm Evaluation.

Synchronization: Background, the critical section problem, Petersons solution, Synchronization hardware, Semaphores, Classic problems of synchronization, Monitors, Synchronization examples, Atomic transactions

Textbook1: Chapter 5, 6

RBT: L1, L2

Module – 4

Deadlocks: System model, Deadlock characterization, Method of handling deadlock, Deadlock prevention, Avoidance, Detection, Recovery from deadlock

Memory management strategies: Background, swapping, contiguous memory allocation, paging, structure of page table, segmentation,

Textbook1: Chapter 7, 8

RBT: L1, L2

Module – 5

Virtual Memory management: Background, Demand paging, Copy-on-write, Page replacement,

allocation of frames, Trashing, Memory mapped files, Allocating Kernel memory, Operating system examples

File system: File concept, Access methods, Directory structure, File system mounting, File sharing, protection

Textbook1: Chapter 9, 10

RBT: L1, L2

Course outcomes: The students should be able to:

- Explain the fundamentals of operating system
- Comprehend process management, memory management and storage management.
- Familiar with various types of operating systems

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Course	e Learning Objectives: This course					
•	Implement and evaluate ML algori	thms in Python.	/Java programming la	nguage.		
Descrip	ptions (if any):	<i>y</i>	7 2 3	66		
1. The	programs can be implemented in eit	her JAVA or Py	ython.			
	sets can be taken from standard rep					
	ation procedure of the required so	•		ried out in		
	and documented in the journal.		<u> </u>			
Progra	ms List:					
1	T1	EINID Calaasi	41 C C 1' 41	t : C' -		
1.	Implement and demonstratethe					
	hypothesis based on a given set of training data samples. Read the training data from CSV file and show the output for test cases. Develop an interactive program by					
	Compareing the result by impl					
2	For a given set of training data					
2	demonstrate the Candidate-El					
	of all hypotheses consistent wi	•		ption of the set		
3				ormation) activity		
3	Demonstrate Pre processing (Data Cleaning, Integration and Transformation) activity on suitable data:					
	For example:					
	Identify and Delete Rows that Contain Duplicate Data by considering an appropriate					
	dataset.	о опишт 2 и-ра	tout 2 and of temples	ring un appropriate		
	Identify and Delete Columns	That Contain a	Single Value by con	sidering an		
	appropriate dataset.		8 · · · · · · · y · ·	8		
4	Demonstrate the working of th	e decision tree	based ID3 algorithm .	Use an appropriate		
	data set for building the decision tree and apply this knowledge toclassify a new					
	sample.			<u>-</u>		
5	Demonstrate the working of th	e Random fores	st algorithm . Use an a	appropriate data set		
	for building and apply this kno					
6	Implement the naïve Bayesian					
	.CSV file. Compute the accura					
7	C	Assuming a set of documents that need to be classified, use the naive Bayesian				
	Classifier model to perform this task. Calculate the accuracy, precision, and recall for					
	your data set.					
8	Construct aBayesian network considering medical data. Use this					
	model to demonstrate the diagr	nosis of heart pa	atients using standard	Heart Disease		
	Data Set.		1	11 00-1		
9	Demonstrate the working of El	M algorithm to	cluster a set of data st	ored in a .CSV file.		
	Demonstrate the working of S	VM classifier for	or a cuitable data set			
10	Demonstrate the working of S	v ivi ciassifici ic	n a suitable data set			

Laboratory Outcomes: The student should be able to:

- Implement and demonstration of ML algorithms.
- Evaluation of different algorithms.

Conduct of Practical Examination:

- Experiment distribution
 - o For laboratories having only one part: Students are allowed to pick one experiment from the lot with equal opportunity.
 - o For laboratories having PART A and PART B: Students are allowed to pick one experiment from PART A and one experiment from PART B, with equal opportunity.
- Change of experiment is allowed only once and marks allotted for procedure to be made zero of the changed part only.
- Marks Distribution (Subjected to change in accordance with university regulations)
 - m) For laboratories having only one part Procedure + Execution + Viva-Voce: 15+70+15 = 100 Marks
 - n) For laboratories having PART A and PART B
 - i. Part A Procedure + Execution + Viva = 6 + 28 + 6 = 40 Marks
 - ii. Part B Procedure + Execution + Viva = 9 + 42 + 9 = 60 Marks

DIGITAL IMAGE PROCESSING LABORATORY WITH MINI PROJECT (Effective from the academic year 2018 -2019) SEMESTER – VI Subject Code 18AIL67 CIE Marks 40 Number of Contact Hours/Week 0:2:2 SEE Marks 60 Total Number of Lab Contact Hours 03

CREDITS - 2

Course Learning Objectives: This course will enable students to:

- Demonstrate the basic skills of image process
- Demonstrate the application development skills
- Design and develop the applications of images

Descriptions (if any): --

- Programming tools preferred: SCILAB, Python, Java or any other relevant platform.
- For Part A: Students must exhibit the results and its print copy to be attached to Lab record.
- For Part B: Real Time Images can be used to demonstrate the work.

During the practical exam: the students should demonstrate and answer Viva-Voce

Programs List:PART A

1	Write a Program to read a digital image. Split and display image into 4 quadrants, up, down, right and left
2	Write a program to showrotation, scaling, and translation of an image.
3	Read an image, first apply erosion to the image and then subtract the result from the original. Demonstrate the differencein the edge image if you use dilation instead of erosion.
4	Read an image and extract and display low-level features such as edges, textures usingfiltering techniques
5	Demonstrate enhancing and segmenting low contrast 2D images.

PART B: MINI PROJECT

Student should develop a mini project and it should be demonstrated in the laboratory examination, Some of the projects are listed and it is not limited to:

- ➤ Recognition of License Plate through Image Processing
- ➤ Recognition of Face Emotion in Real-Time
- > Detection of Drowsy Driver in Real-Time
- > Recognition of Handwriting by Image Processing
- Detection of Kidney Stone
- Verification of Signature
- Compression of Color Image
- Classification of Image Category
- > Detection of Skin Cancer
- ➤ Marking System of Attendance using Image Processing
- Detection of Liver Tumor
- > IRIS Segmentation
- > Detection of Skin Disease and / or Plant Disease
- ➤ Biometric Sensing System
- ➤ Mobile Phone Camera-based Light Communications
- Modeling of Perspective Distortion within Face Images & Library for Object Tracking
- Controlling of Intelligent Traffic Light & Image Processing

➤ Controlling of Pests in Agriculture Field with Image Processing (During the practical exam: the students should demonstrate and answer Viva-Voce)

Laboratory Outcomes: The student should be able to illustrate the following operations:

- Image Segmentation algorithm development
- Image filtering in spatial and frequency domain.
- Morphological operations in analyzing image structures

Conduct of Practical Examination:

- Experiment distribution
 - o For laboratories having only one part: Students are allowed to pick one experiment from the lot with equal opportunity.
 - For laboratories having PART A: Students are allowed to pick one experiment from PART
 A, with equal opportunity. The mini project from PART B to be run &exhibit the results
 also a report on the work is produced.
- Change of experiment is allowed only once and marks allotted for procedure to be made zero of the changed part only.
- Marks Distribution (Subjected to change in accordance with university regulations)
 - o) For laboratories having only one part Procedure + Execution + Viva-Voce: 15+70+15 = 100 Marks
 - p) For laboratories having PART A and PART B
 - i. Part A Procedure + Execution + Viva = 6 + 28 + 6 = 40 Marks
 - ii. Part B Procedure + Execution + Viva = 9 + 42 + 9 = 60 Marks

MOBILE APPLICATION DEVELOPMENT LABORATORY (Effective from the academic year 2018 -2019)

SEMESTER - VI

Course Code	18AIMP68	IA Marks	40	
Number of Contact Hours/Week	0:2:2	Exam Marks	60

CONTRACTOR AND				

CREDITS - 02

Course Learning Objectives: This course will enable students to:

- Learn and acquire the art of AndroidProgramming.
- Configure Android studio to run theapplications.
- Understand and implement Android's User interfacefunctions.
- Create, modify and query on SQlitedatabase.
- Inspect different methods of sharing data usingservices.

Descriptions (if any):

- 1. Installation procedure of the Android Studio/Java software must be demonstrated and carried out
- 2. Students should use the latest version of Android Studio/Java/Kotlin to execute these programs. Diagrams given are for representational purpose only, students are expected to improvise on
- 3. Part B programs should be developed as an application and be demonstrated as a mini project in a group by adding extra features or the students can also develop their own application and demonstrate it as a mini project. (Projects/programs are not limited to the list given in Part B)

Programs List:

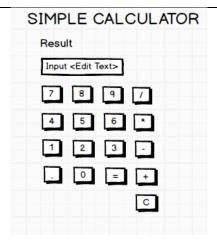

2

PART – A

Create an application to design a Visiting Card. The Visiting card should have a company logo at the 1 top right corner. The company name should be displayed in Capital letters, aligned to the center. Information like the name of the employee, job title, phone number, address, email, fax and the website address isto be displayed. Insert a horizontal line between the job title and the phone number.

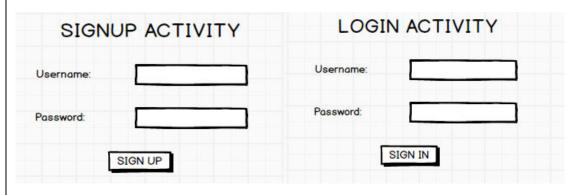

Develop an Android application using controls like Button, TextView, EditText for designing a calculatorhaving basic functionality like Addition, Subtraction, Multiplication, and Division.

- 3 Create a SIGN Up activity with Username and Password. Validation of password should happen based on the following rules:
 - Password should contain uppercase and lowercaseletters.
 - Password should contain letters and numbers.
 - Password should contain specialcharacters.
 - Minimum length of the password (the default value is8).

On successful **SIGN UP** proceed to the next Login activity. Here the user should **SIGN IN** using the Username and Password created during signup activity. If the Username and Password are matched then navigate to the next activity which displays a message saying "Successful Login" or else display a toast message saying "Login Failed". The user is given only two attempts and after that display a toast message saying "Failed Login Attempts" and disable the SIGN IN button. Use Bundle to transfer information from one activity to another.

Develop an application to set an image as wallpaper. On click of a button, the wallpaper image should start to change randomly every 30 seconds. CHANGING WALLPAPER APPLICATION CLICK HERE TO CHANGE WALLPAPER 5 Write a program to create an activity with two buttons START and STOP. On pressin g of the START button, the activity must start the counter by displaying the numbers from One and the counter must keep on counting until the STOP button is pressed. Display the counter value in a TextViewcontrol. COUNTER APPLICATION Counter Value START 6 Create two files of XML and JSON type with values for City_Name, Latitude, Longitude, Temperature, and Humidity. Develop an application to create an activity with two buttons to parse the XML and JSON files which when clicked should display the data in their respective layouts side by side. PARSING XML AND JSON DATA JSON Data XML DATA PARSING XML AND JSON DATA City_Name: Mysore City_Name: Mysore 12.295 12.295 Latitude: Latitude: Parse XML Data 76.639 76.639 Longitude: Longitude: Temperature: 22 Temperature: 22 Parse JSON Data Humidity: Humidity: 90%

7	Develop a simple application with one Edit Text so that the user can write some text in it. Create a button called "Convert Text to Speech" that converts the user input text into voice.
	button cancal Convert Text to specch that converts the user input text into voice.
	TEXT TO SPEECH APPLICATION
	Convert Text to Speech
8	Create an activity like a phone dialer with CALL and SAVE buttons. On pressing the CALL
o	button, it must call the phone number and on pressing the SAVE button it must save the number to the phonecontacts.
	CALL AND SAVE APPLICATION
	1234567890 DEL
	1 2 3
	4 5 6
	7 8 9
	* 0 #
	CALL SAVE
	PART - B
1	Write a program to enter Medicine Name, Date and Time of the Day as input from the user and store it in the SQLite database. Input for Time of the Day should be either Morning or Afternoon
	or Evening or Night. Trigger an alarm based on the Date and Time of the Day and display the
	Medicine Name.
	MEDICINE DATABASE
	Medicine Name:
	Tiedrome Hame.
	Date:
	Time of the Day:
	Tracet
	Insert

Develop a content provider application with an activity called "Meeting Schedule" which takes Date, Time and Meeting Agenda as input from the user and store this information into the SQLite database. Create another application with an activity called "Meeting Info" having DatePicker control, which on the selection of a date should display the Meeting Agenda information for that particular date, else it should display a toast message saying "No Meeting on this Date". MEETING INFO Pick a date to get meeting info: MEETING SCHEDULE Date: Time: Meeting Agenda: Add Meeting Agenda Search 3 Create an application to receive an incoming SMS which is notified to the user. On clicking this SMS notification, the message content and the number should be displayed on the screen. Use appropriate emulator control to send the SMS message to your application. SMS APPLICATION Display SMS Number Display SMS Message 4 Write a program to create an activity having a Text box, and also Save, Open and Create buttons. The user has to write some text in the Text box. On pressing the Create button the text should be saved as a text file in MkSDcard. On subsequent changes to the text, the Save button should be pressed to store the latest content to the same file. On pressing the Open button, it should display the contents from the previously stored files in the Text box. If the user tries to save the contents in the Textbox to a file without creating it, then a toast message has to be displayed saying "First

Create aFile".

	FILE APPLICATION
	Create Open
	Save
5	Create an application to demonstrate a basic media player that allows the user to Forward, Backward, Play and Pause an audio. Also, make use of the indicator in the seek bar to move the audio forward or backward as required.
	MEDIA PLAYER APPLICATION
	Audio Name
6	Develop an application to demonstrate the use of Asynchronous tasks in android. The asynchronous task should implement the functionality of a simple moving banner. On pressing the Start Task button, the banner message should scroll from right to left. On pressing the Stop Task button, the banner message should stop. Let the banner message be "Demonstration of Asynchronous Task".
	ASYNCHRONOUS TASK
	Start Task
	End Task
7	Develop an application that makes use of the clipboard framework for copying and pasting of the text. The activity consists of two Edit Text controls and two Buttons to trigger the copy and paste functionality.
	<u> </u>

CLIPBOARD ACTIVITY	
<u> </u>	
Copy Text Paste Text	

8 Create an AIDL service that calculates Car Loan EMI. The formula to calculate EMI is

$$E = P * (r(1+r)^n)/((1+r)^n-1)$$

where

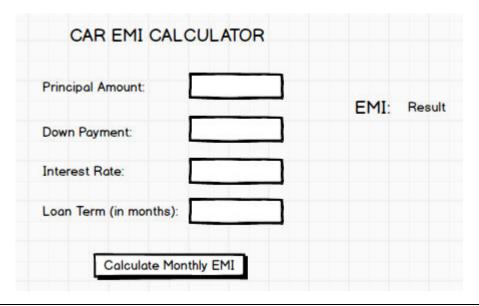

E = The EMI payable on the car loan amount

P = The Car loan Principal Amount

r =The interest rate value computed on a monthly basis

n =The loan tenure in the form of months

The down payment amount has to be deducted from the principal amount paid towards buying the Car. Develop an application that makes use of this AIDL service to calculate the EMI. This application should have four Edit Text to read the Principal Amount, Down Payment, Interest Rate, Loan Term (in months) and a button named as "Calculate Monthly EMI". On click of this button, the result should be shown in a Text View. Also, calculate the EMI by varying the Loan Term and Interest Rate values.

Laboratory Outcomes: After studying these laboratory programs, students will be able to

- Create, test and debug Android application by setting up Android developmentenvironment.
- Implement adaptive, responsive user interfaces that work across a wide range ofdevices.
- Infer long running tasks and background work in Androidapplications.
- Demonstrate methods in storing, sharing and retrieving data in Androidapplications.

• Infer the role of permissions and security for Androidapplications.

Procedure to Conduct Practical Examination

- Experiment distribution
 - For laboratories having only one part: Students are allowed to pick one experiment from the lot with equal opportunity.
 - For laboratories having PART A and PART B: Students are allowed to pick one experiment from PART A with equal opportunity and in Part B demonstrate the Mini project.
- Change of experiment is allowed only once and marks allotted for procedure to be made zero of the changed part only.
- Marks Distribution (Subjected to change in accoradance with university regulations)
 - q) For laboratories having only one part Procedure + Execution + Viva-Voce: 15+70+15 = 100 Marks
 - r) For laboratories having PART A and PART B
 - i. Part A Procedure + Execution + Viva = 6 + 28 + 6 = 40 Marks
 - ii. Part B Procedure + Execution + Viva = 9 + 42 + 9 = 60 Marks

ADVANCED ARTIFICIAL INTLLIGENCE (Effective from the academic year 2018 -2019) SEMESTER – VII				
Subject Code	18AI71	CIE Marks	40	
Number of Contact Hours/Week	4:0:0	SEE Marks	60	
Total Number of Contact Hours	50	Exam Hours	3 Hrs	

CREDITS –4

Course Learning Objectives: This course will enable students to:

- Demonstrate the fundamentals of Intelligent Agents
- Illustrate the reasoning on Uncertain Knowledge
- Explore the explanation based learning in solving AI problems
- Demonstrate the applications of Rough sets and Evolutionary Computing algorithms

Module 1	Contact
	Hours
IntelligentAgents: Agents and Environments, Good Behavior: The Concept of	10
Rationality, The Nature of Environments, The Structure of Agents	
Problem Solving: Game Paying	
T1: Chapter 2, Chapter 5 (2.1 to 2.4, 5.1 to 5.6)	
Module 2	
Uncertain knowledge and Reasoning: Quantifying Uncertainty, Acting under Uncertainty	10
, Basic Probability Notation, Inference Using Full Joint Distributions, Independence ,	
Bayes'Rule and Its Use The WumpusWorld Revisited,	
T1: Chapter 13	
Module 3	
Probabilistic Reasoning, Representing Knowledge in an Uncertain Domain, The	10
Semantics of Bayesian Networks , Efficient Representation of Conditional Distributions	
Exact Inference in Bayesian Networks, Approximate Inference in Bayesian Networks.	
T1: Chapter 14	
Module 4	
Perception : Image Formation, Early Image-Processing Operation, Object Recognition by	10
Appearance, Reconstructing the 3DWorld. Object Recognition from Structural	
Information, Using Vision	
T1: Chapter 24	
Module 5	
Overview and language modeling: Overview: Origins and challenges of NLP-Language	10
and Grammar-Processing Indian Languages- NLP Applications-Information Retrieval.	
Language Modeling: Various Grammar- based Language Models-Statistical Language	
Model.	
T2: Chapter 1, 2	
Course Outcomes: The student will be able to	1

Course Outcomes: The student will be able to:

- Demonstrate the fundamentals of Intelligent Agents
- Illustrate the reasoning on Uncrtain Knowledge

- Explore the explanation based learning in solving AI problems
- Demonstrate the applications of Rough sets and Evolutionary Computing algorithms

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Textbooks:

- 1. Artificial Intelligence, A Modern Approach, Stuart J. Russell and Peter Norvig, Third Edition, Pearson, 2010
- 2. Tanveer Siddiqui, U.S. Tiwary, "Natural Language Processing and Information Retrieval", Oxford University Press, 2008.

ADVANCED MACHINE LEARNING (Effective from the academic year 2018 -2019) SEMESTER – VII					
Subject Code	18AI72	CIE Marks	40		
Number of Contact Hours/Week	4:0:0	SEE Marks	60		
Total Number of Contact Hours	50	Exam Hours	3 Hrs		
CDEDITS 4					

CREDITS –4

Course Learning Objectives: This course will enable students to:

- Demonstrate the fundamentals of GDT
- Illustrate the use of KNN
- Explore the Text feature Engineering concepts with Applications Demonstrate the use of Ensemble Methods

Module 1	Contact Hours
Advanced Machine Learning:	10
Overview, Gradient Descent algorithm, Scikit-learn library for ML, Advanced Regression	
models, Advanced ML algorithms, KNN, ensemble methods.	
T2: Chapter 6 (upto 6.5.4)	
Forecasting: Overview, components, moving average, decomposing time series, auto-	
regressive Models.	
T2: Chapter: 8	
Module 2	
Hidden Markov Model:Introduction, Issues in HMM(Evalution, decoding, learning,	10
classifier)	
T3: Chapter 12	
CLUSTERING	
Introduction, Types of clustering, Partitioning methods of clustering (k-means, k-medoids),	
hierarchical methods	
T3: Chapter 13	
Module 3	
Recommender System:	10
Datasets, Association rules, Collaborative filtering, User-based similarity, item-based	
similarity, using surprise library, Matrix factorization	
Text Analytics:	
Overview, Sentiment Classification, Naïve Bayes model for sentiment classification, using	
TF-IDF vectorizer, Challenges of text analytics	
T2: Chapter 9 and 10	
Module 4	
Neural networks and genetic algorithms:	10
Brief history and Evolution of Neural network, Biological neuron, Basics of ANN, Activation	
function, MP model.	
T3: Chapter 6	
Neural Network Representation – Problems – Perceptrons – Multilayer Networks and Back	
Propagation Algorithms – Genetic Algorithms – Hypothesis Space Search – Genetic	

Programming – Models of Evolution and Learning.	
T1: Chapter 4 & 9	
Module 5	
Instant based learning and learning set of rules:	10
Evaluating Hypothesis: Motivation, Estimating hypothesis accuracy, Basics of sampling theorem, General approach for deriving confidence intervals, Difference in error of two hypothesis, Comparing learning algorithms. Instance Based Learning: Introduction, k-nearest neighbor learning(review), locally weighted regression, radial basis function, cased-based reasoning, Reinforcement Learning: Introduction, Learning Task, Q Learning	
T1 :Sections: 5.1-5.6, 8.1-8.5, 13.1-13.3	

Course Outcomes: The student will be able to :

- Apply effectively ML algorithms to solve real world problems.
- Apply Instant based techniques and derive effectively learning rules to real world problems.

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Textbooks:

- T1. Tom M. Mitchell, Machine Learning, McGraw-Hill Education, 2013
- T2. Machine Learning using Python ,Manaranjan Pradhan, U Dinesh Kumar, Wiley 2019

Number of Contact Hours/Week	3:0:0	SEE Marks	60		
Total Number of Contact Hours	40	Exam Hours	3 Hrs		
CDEDITS 2					

CREDITS –3

Course Learning Objectives: This course will enable students to:

- Assess the genesis and impact of IoT applications, architectures in real world.
- Illustrate diverse methods of deploying smart objects and connect them to network.
- Compare different Application protocols for IoT.
- Infer the role of Data Analytics and Security in IoT.

Module 1	Contact Hours
What is IoT, Genesis of IoT, IoT and Digitization, IoT Impact, Convergence of IT and IoT,	08
IoT Challenges, IoT Network Architecture and Design, Drivers Behind New Network	
Architectures, Comparing IoT Architectures, A Simplified IoT Architecture, The Core IoT	
Functional Stack, IoT Data Management and Compute Stack.	
Textbook 1: Ch.1, 2	
RBT: L1, L2, L3	
Module 2	
Smart Objects: The "Things" in IoT, Sensors, Actuators, and Smart Objects, Sensor	08
Networks, Connecting Smart Objects, Communications Criteria, IoT Access Technologies.	
Textbook 1: Ch.3, 4	
RBT: L1, L2, L3	
Module 3	
IP as the IoT Network Layer, The Business Case for IP, The need for Optimization,	08
Optimizing IP for IoT, Profiles and Compliances, Application Protocols for IoT, The	
Transport Layer, IoT Application Transport Methods.	
Textbook 1: Ch.5, 6	
RBT: L1, L2, L3	
Module 4	
Data and Analytics for IoT, An Introduction to Data Analytics for IoT, Machine Learning,	08
Big Data Analytics Tools and Technology, Edge Streaming Analytics, Network Analytics,	
Securing IoT, A Brief History of OT Security, Common Challenges in OT Security, How IT	
and OT Security Practices and Systems Vary, Formal Risk Analysis Structures: OCTAVE	
and FAIR, The Phased Application of Security in an Operational Environment	
Textbook 1: Ch.7, 8	
RBT: L1, L2, L3	
Module 5	
IoT Physical Devices and Endpoints - Arduino UNO: Introduction to Arduino, Arduino	08
UNO, Installing the Software, Fundamentals of Arduino Programming. IoT Physical	
Devices and Endpoints –RaspberryPi: Introduction to RaspberryPi, About the RaspberryPi	
Board: Hardware Layout, Operating Systems on RaspberryPi, Configuring RaspberryPi,	
Programming RaspberryPi with Python, Wireless Temperature Monitoring System Using Pi,	
DS18B20 Temperature Sensor, Connecting Raspberry Pi via SSH, Accessing Temperature	
from DS18B20 sensors, Remote access to RaspberryPi, Smart and Connected Cities, An IoT	
Strategy for Smarter Cities, Smart City IoT Architecture, Smart City Security Architecture,	

Smart City Use-Case Examples.

Textbook 1: Ch.12

Textbook 2: Ch.7.1 to 7.4, Ch.8.1 to 8.4, 8.6

RBT: L1, L2, L3

Course Outcomes: The student will be able to:

- Interpret the impact and challenges posed by IoT networks leading to new architectural models.
- Compare and contrast the deployment of smart objects and the technologies to connect them to network.
- Appraise the role of IoT protocols for efficient network communication.
- Elaborate the need for Data Analytics and Security in IoT.
- Illustrate different sensor technologies for sensing real world entities and identify the applications of IoT in Industry.

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Textbooks:

- 1. David Hanes, Gonzalo Salgueiro, Patrick Grossetete, Robert Barton, Jerome Henry,"**IoT Fundamentals: Networking Technologies, Protocols, and Use Cases for the Internet of Things**", 1stEdition, Pearson Education (Cisco Press Indian Reprint). (**ISBN:** 978-9386873743)
- 2. Srinivasa K G, "Internet of Things", CENGAGE Leaning India, 2017

Reference Books:

- 1. Vijay Madisetti and ArshdeepBahga, "Internet of Things (A Hands-on-Approach)", 1stEdition, VPT, 2014. (ISBN: 978-8173719547)
- 2. Raj Kamal, "Internet of Things: Architecture and Design Principles", 1st Edition, McGraw Hill Education, 2017. (ISBN: 978-9352605224)

Mandatory Note:

Distribution of CIE Marks is a follows (Total 40 Marks):

- 20 Marks through IA Tests
- 20 Marks through practical assessment

Maintain a copy of the report for verification during LIC visit.

Posssible list of practicals:

- 1. Transmit a string using UART
- 2. Point-to-Point communication of two Motes over the radio frequency.
- 3. Multi-point to single point communication of Motes over the radio frequency.LAN (Subnetting).
- 4. I2C protocol study
- 5. Reading Temperature and Relative Humidity value from the sensor

Textbook 1: Chapter 5 (5.1-5.9, 5.11,5.12,5.16)

RBT:L1,L2

Module – 4

Cloud Resource Management and Scheduling: Policies and mechanisms for resource management, Application of control theory to task scheduling on a cloud, Stability of a two-level resource allocation architecture, Feedback control based on dynamic thresholds, Coordination of specialized autonomic performance managers, A utility-based model for cloud-based Web services, Resourcing bundling: Combinatorial auctions for cloud resources, Scheduling algorithms for computing clouds, Fair queuing, Start-time fair queuing, Borrowed virtual time, Cloud scheduling subject to deadlines, Scheduling MapReduce applications subject to deadlines, Resource management and dynamic scaling, Exercises and problems.

Textbook1: Chapter 6 (6.1-6.14, 6.16)

RBT: L1, L2, L3

Module – 5

Cloud Security, Cloud Application Development: Cloud security risks, Security: The top concern for cloud users, Privacy and privacy impact assessment, Trust, Operating system security, Virtual machine Security, Security of virtualization, Security risks posed by shared images, Security risks posed by a management OS, A trusted virtual machine monitor, Amazon web services: EC2 instances, Connecting clients to cloud instances through firewalls, Security rules for application and transport layer protocols in EC2, How to launch an EC2 Linux instance and connect to it, How to useS3 in java

Textbook1: Chapter 9 (9.1-9.9, 11.1-11.5)

RBT: L1, L2, L3

Course outcomes: The students should be able to:

- Understand the concepts of cloud computing, virtualization and classify services of cloud computing
- Illustrate architecture and programming in cloud
- Define the platforms for development of cloud applications and List the application of cloud.

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.

08

08

• The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Cloud Computing Theory and Practice, Dan C. Marinescu, Morgan Kaufmann, Elsevier 2013.

Reference Books:

FUZZY LOGIC AND ITS APPLICATION (Effective from the academic year 2018 -2019) SEMESTER – VII				
Subject Code	18AI741	CIE Marks	40	
Number of Contact Hours/Week	3:0:0	SEE Marks	60	
Total Number of Contact Hours	40	Exam Hours	3 Hrs	
CREDITS – 03				

Course Learning Objectives: This course will enable students to:

- Define crisp set and fuzzy set theory.
- Identify the requirements to make calculation of fuzzy set theory.
- Describe fuzzy arithmetic principles.
- Explain fuzzy rules based systems.
- Apply fuzzy graphical techniques to draw inference over the computing problems.

Module – 1	Contact
	Hours
Introduction: Historical perspective, utility of fuzzy systems, limitations of fuzzy systems,	08
statistics andrandom processes, uncertainty in information, fuzzy sets and membership,	
chance versus fuzziness, sets aspoints in Hypercube. Classical Sets and Fuzzy Sets:	
classical sets, operations on them, mapping of classical sets to functions, fuzzysets, fuzzy	
set operations, properties of fuzzy sets, non-interactive fuzzy sets.	
RBT: L1, L2	
Module – 2	
Classical Relations and Fuzzy Relations: Cartesian Product, Crisp Relations – Cardinality	08
of Crisp Relations, Operations on Crisp Relations, and Properties of Crisp Relations,	
Composition. Fuzzy Relations -Cardinality of Fuzzy Relations, Operations on Fuzzy	
Relations, Properties of Fuzzy Relations, Fuzzy Cartesian Productand Composition, Non-	
interactive Fuzzy Sets.	
RBT: L1, L2	
Module – 3	
Membership Functions: Features of the Membership Function, Standard Forms and	08
Boundaries, Fuzzification, defuzzification to crisp sets, Lambda-Cuts for Fuzzy Sets,	
Lambda-Cuts for Fuzzy Relations, Defuzzification Methods. Development of membership	
Functions: Membership value assignments	
RBT: L1, L2	
Module – 4	
Fuzzy Arithmetic and the Extension Principle : Crisp Functions, Mapping and Relations,	08

Functions of fuzzySets – Extension Principle, Fuzzy Transform (Mapping), Practical Considerations. Fuzzy Numbers IntervalAnalysis in Arithmetic, Approximate Methods of Extension – Vertex method, DSW Algorithm, RestrictedDSW Algorithm, Comparisons. Fuzzy Vectors.

RBT: L1, L2

Module – 5

Fuzzy Rule Based Systems: Natural Language, Linguistic Hedges, Rule-Based Systems – Canonical RuleForms, Decomposition of Compound Rules, Likelihood and Truth Qualification, Aggregation of Fuzzy Rules.Graphical Techniques of Inference.

0

RBT: L1, L2

Course outcomes: The students should be able to:

- Provide basic elements of fuzzy sets.
- Differentiate between fuzzy set and classical set theory.
- Apply fuzzy membership functions to solve value assignment problems.
- Explain approximate methods of fuzzy arithmetic and extension principle.
- Discuss the applications of fuzzy rule based systems.

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

SEMANTIC WEB AND SOCIAL NETWORKS			
(Effective from the academic year 2018 -2019) SEMESTER – VII			
Subject Code	18AI743	CIE Marks	40
Number of Contact Hours/Week	3:0:0	SEE Marks	60
Total Number of Contact Hours	40	Exam Hours	3 Hrs
CREDITS – 03			

Course Learning Objectives: This course will enable students to:

- To understand the components of the social network.
- To model and visualize the social network.
- To mine the users in the social network.
- To understand the evolution of the social network.
- To know the applications in real time systems.

Module – 1	Contact Hours
Web Intelligence: Thinking and Intelligent Web Applications, The Information Age	08
,The World Wide. Web, Limitations of Today's Web, The Next Generation Web,	
Machine Intelligence, Artificial Intelligence, Ontology, Inference engines, Software	
Agents, Berners-Lee www, Semantic Road Map,Logic on the semantic Web.	
T1: Chapter 1,3,4	

RBT: L1, L2		
Module – 2		
Knowledge Representation for the Semantic Web: Ontologies and their role in the semantic web, Ontologies Languages for the Semantic Web –Resource Description Framework(RDF) / RDF Schema, Ontology Web Language(OWL), UML, XML/XML Schema.		
T1: Chapter 2,5		
RBT: L1, L2		
Module – 3		
Ontology Engineering: Ontology Engineering, Constructing Ontology, Ontology Development Tools, Ontology Methods, Ontology Sharing and Merging, Ontology Libraries and Ontology Mapping, Logic, Rule and Inference Engines.	08	
T1: Chapter 7,8		
RBT: L1, L2		
Module – 4		
Semantic Web Applications, Services and Technology: Semantic Web applications and services, Semantic Search, e-learning, Semantic Bioinformatics, Knowledge Base, XML Based Web Services, Creating an OWL-S Ontology for Web Services, Semantic Search Technology, Web Search Agents and Semantic Methods		
T1: Chapter 10,11,12		
RBT: L1, L2		
Module – 5		
Social Network Analysis and semantic web. What is social Networks analysis, development of the social networks analysis, Electronic Sources forNetwork Analysis – Electronic Discussion networks, Blogs and Online Communities, Web Based Networks. Building Semantic Web Applications with social network features. T2: Chapter 2,3	08	
RBT: L1, L2		
Course outcomes: The students should be able to:		
Work on the internal components of the social network.		
 work on the internal components of the social network. Model and visualize the social network. 		
 Analyse the behaviour of the users in the social network. 		
Predict the possible next outcome of the social network.		
Apply social network in real time applications.		
Question Paper Pattern:		
• The question paper will have ten questions.		
Each full Question consisting of 20 marks		

- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Textbooks:

- 1. Thinking on the Web Berners Lee, Godel and Turing, Wiley inter science, 2008.
- 2. Social Networks and the Semantic Web, Peter Mika, Springer, 2007.

- 1. Semantic Web Technologies, Trends and Research in Ontology Based Systems, J. Davies, R. Studer, P. Warren, John Wiley & Sons.
- 2. Semantic Web and Semantic Web Services -Liyang Lu Chapman and Hall/CRC Publishers,(Taylor & Francis Group)
- 3. Information Sharing on the semantic Web Heiner Stuckenschmidt; Frank Van Harmelen, Springer Publications.
- 4. Programming the Semantic Web, T. Segaran, C.Evans, J. Taylor, O'Reilly, SPD.

Bı	USINESS INTELL	IGENCE

Number of Contact Hours/Week	3:0:0	SEE Marks	60
Total Number of Contact Hours	40	Exam Hours	3 Hrs
	CREDITS -	03	
Course Learning Objectives: This	course will enable	e students to:	
• Explain the Decision Support s	ystems and Busines	s Intelligence framework.	
 Illustrate the significance of comathematical modelling behind 	*	n Support, and understand	the

- mathematicalmodelling behind decision support.
 Explain Data warehousing, its architecture and Extraction, Transformation, and Load (ETL) Processes. Explore knowledge management, explain its activities, approaches and its implementation.
- Describe the Expert systems, areas suitable for application of experts system

Module 1	Camtaat
Module – 1	Contact
	Hours
Decision Support and Business Intelligence: Opening Vignette, Changing Business	08
Environments and Computerized Decision Support, Managerial Decision Making,	
Computerized Support for Decision Making, AnEarly Framework for Computerized	
Decision Support, The Concept of Decision Support Systems (DSS), Aframework for	
Business Intelligence (BI), A Work System View of Decision Support.	
Text Book 1: Chapter 1	
RBT: L1, L2	
Module – 2	
Computerised Decision Support: Decision Making, Models, Phases of the Decision-	08
Making Process, TheIntelligence Phase, The Design Phase, The Choice Phase, The	
Implementation Phase, How Decisions AreSupported. Modelling and Analysis: Structure of	
Mathematical Models for Decision Support, Certainty, Uncertainty, and Risk, Management	
Support Systems, Multiple Goals, Sensitivity Analysis, What-If Analysis, and Goal Seeking	
Text Book 1: Chapter 2	
RBT: L1, L2	
Module – 3	
Data Warehousing: Data Warehousing Definitions and Concepts, Data Warehousing	08
Process Overview, DataWarehousing Architectures, Data Integration and the Extraction,	
Transformation, and Load (ETL) Processes.	
Transformation, and Boad (BTB) Trocesses.	
Text Book 1: Chapter 5	
RBT: L1, L2	
Module – 4	
	00
Knowledge Management: Introduction to Knowledge Management, Organizational	08
Learning and Transformation, Knowledge Management Activities, Approaches to	
Knowledge Management, InformationTechnology (IT) In Knowledge Management,	
Knowledge Management Systems Implementation.	
Torrt Dook 1. Chanton 11	
Text Book 1: Chapter 11	
RBT: L1, L2	

Module – 5	
Expert Systems: Basic Concepts of Expert Systems, Applications of Expert Systems,	08
Structure of ExpertSystems, Knowledge Engineering, Problem Areas Suitable for Expert	
Systems, Development of Expert Systems, Benefits, Limitations, and Critical Success	
Factors of Expert Systems.	
Text Book 1: Chapter 12	

RBT: L1, L2

Course outcomes: The students should be able to:

- Apply the basics of data and business to understand Decision Support systems and Business Intelligence framework.
- Describe the significance of 106omputerized Decision Support, apply the basics of mathematics to understand the mathematical modelling behind decision support.
- Explain Data warehousing, its architecture and Extraction, Transformation, and Load (ETL) Processes.
- Analyze the importance of knowledge management and explain its activities, approaches and its implementation.
- Describe the Expert systems and analyze its development, discuss areas suitable forapplication of experts system.

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Textbooks:

INTRODUCTION TO BIG DATA ANALYTICS (OPEN ELECTIVE)

(Effective from the academic year 2018 -2019)

SEMESTER - VII

Subject Code	18CS751	CIE Marks	40
Number of Contact Hours/Week	3:0:0	SEE Marks	60
Total Number of Contact Hours	40	Exam Hours	3 Hrs

CREDITS -3

Course Learning Objectives: This course will enable students to:

- Interpret the data in the context of the business.
- Identify an appropriate method to analyze the data
- Show analytical model of a system

Module – 1	Contact
	Hours
Introduction to Data Analytics and Decision Making: Introduction, Overview of the	08
Book, The Methods, The Software, Modeling and Models, Graphical Models, Algebraic	
Models, Spreadsheet Models, Seven-Step ModelingProcess. Describing the Distribution of	
a Single Variable:Introduction,Basic Concepts, Populations and Samples, Data	
Sets, Variables, and Observations, Types of Data, Descriptive Measures for Categorical	
Variables, Descriptive Measures for Numerical Variables, Numerical Summary Measures,	
Numerical Summary Measures with StatTools, Charts for Numerical Variables, Time Series	
Data, Outliers and Missing Values, Outliers, Missing Values, Excel Tables for	
Filtering, Sorting, and Summarizing.	
Finding Relationships among Variables: Introduction, Relationships among Categorical	
Variables, Relationships among Categorical Variables and a Numerical Variable, Stacked	
and Unstacked Formats, Relationships among Numerical Variables, Scatterplots,	
Correlation and Covariance, Pivot Tables.	
Textbook 1: Ch. 1,2,3	
RBT: L1, L2, L3	

Module – 2

Probability and Probability Distributions:Introduction,Probability Essentials, Rule of Complements, Addition Rule, Conditional Probability and the Multiplication Rule, Probabilistic Independence, Equally Likely Events, Subjective Versus Objective Probabilities, Probability Distribution of a Single Random Variable, Summary Measures of a Probability Distribution, Conditional Mean and Variance, Introduction to Simulation.

Normal, Binormal, Poisson, and Exponential Distributions: Introduction, The Continuous Distribution. Distributions and Density Functions. The Normal Density, Standardizing: Z-Values, Normal Tables and Z-Values, Normal Calculations in Excel, Empirical Rules Revisited, Weighted Sums of Normal Random Variables, Applications of the Normal Random Distribution, The Binomial Distribution, Mean and Standard Deviation of the Binomial Distribution, The Binomial Distribution in the Context of Sampling, The Normal Approximation to the Binomial, Applications of the Binomial Distribution, The Poisson and Exponential Distributions, The Poisson Distribution, The Exponential Distribution.

Textbook 1: Ch. 4,5 RBT: L1, L2, L3

Module – 3

Decision Making under Uncertainty:Introduction,Elements of Decision Analysis, Payoff Tables, Possible Decision Criteria, Expected Monetary Value(EMY),Sensitivity Analysis, Decision Trees, Risk Profiles, The Precision Tree Add-In,Bayes' Rule, Multistage Decision Problems and the Value of Information, The Value of Information, Risk Aversion and Expected Utility, Utility Functions, Exponential Utility, Certainty Equivalents, Is Expected Utility Maximization Used?

Sampling and Sampling Distributions: Introduction, Sampling Terminology, Methods for Selecting Random Samples, Simple Random Sampling, Systematic Sampling, Stratified Sampling, Cluster Sampling, Multistage Sampling Schemes, Introduction to Estimation, Sources of Estimation Error, Key Terms in Sampling, Sampling Distribution of the Sample Mean, The Central Limit Theorem, Sample Size Selection, Summary of Key Ideas for Simple Random Sampling.

Textbook 1: Ch. 6,7 RBT: L1, L2, L3

Module – 4

Confidence Interval Estimation: Introduction, Sampling Distributions, The t Distribution, Other Sampling Distributions, Confidence Interval for a Mean, Confidence Interval for a Total, Confidence Interval for a Proportion, Confidence Interval for a Standard Deviation, Confidence Interval for the Difference between Means, Independent Samples, Paired Samples, Confidence Interval for the Difference between Proportions, Sample Size Selection, Sample Size Selection for Estimation of the Mean, Sample Size Selection for Estimation of Other Parameters.

Hypothesis Testing:Introduction,Concepts in Hypothesis Testing, Null and Alternative Hypothesis, One-Tailed Versus Two-Tailed Tests, Types of Errors, Significance Level and Rejection Region, Significance from p-values, Type II Errors and Power, Hypothesis Tests and Confidence Intervals, Practical versus Statistical Significance, Hypothesis Tests for a Population Mean, Hypothesis Tests for Other Parameters, Hypothesis Tests for a Population Proportion, Hypothesis Tests for Differences between Population Means, Hypothesis Test for Equal Population Variances, Hypothesis Tests for Difference between Population Proportions, Tests for Normality, Chi-Square Test for Independence.

Textbook 1: Ch. 8,9 RBT: L1, L2, L3

Module – 5

Regression Analysis: Estimating Relationships: Introduction, Scatterplots: Graphing Relationships, Linear versus Nonlinear Relationships, Outliers, Unequal Variance, No Relationship, Correlations: Indications of Linear Relationships, Simple Linear Regression, Least Squares Estimation, Standard Error of Estimate, The Percentage of Variation Explained: R-Square, Multiple Regression, Interpretation of Regression Coefficients, Interpretation of Standard Error of Estimate and R-Square, Modeling Possibilities, Dummy Variables, Interaction Variables, Nonlinear Transformations, Validation of the Fit.

Regression Analysis: Statistical Inference:Introduction,The Statistical Model, Inferences About the Regression Coefficients, Sampling Distribution of the Regression Coefficients, Hypothesis Tests for the Regression Coefficients and p-Values, A Test for the Overall Fit: The ANOVA Table,Multicollinearity,Include/Exclude Decisions, Stepwise Regression,Outliers,Violations of Regression Assumptions,Nonconstant Error Variance,Nonnormality of Residuals,Autocorrelated Residuals ,Prediction.

Textbook 1: Ch. 10,11

RBT: L1, L2, L3

Course outcomes: The students should be able to:

- Explain the importance of data and data analysis
- Interpret the probabilistic models for data
- Define hypothesis, uncertainty principle
- Evaluate regression analysis

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

PYTHON APPLICATION PROGRAMMING (OPEN ELECTIVE)

(Effective from the academic year 2018 -2019)

SEMESTER – VII

Subject Code	18CS752	IA Marks	40
Number of Lecture Hours/Week	3:0:0	Exam Marks	60
Total Number of Lecture Hours	40	Exam Hours	03

CREDITS – 03

Course Objectives: This course will enable students to

- Learn Syntax and Semantics and create Functions in Python.
- Handle Strings and Files in Python.
- Understand Lists, Dictionaries and Regular expressions in Python.
- Implement Object Oriented Programming concepts in Python
- Build Web Services and introduction to Network and Database Programming in Python.

Module – 1	Contact
	Hours
Why should you learn to write programs, Variables, expressions and statement	ts, 08
Conditional execution, Functions	
Textbook 1: Chapters 1 – 4	
RBT: L1, L2, L3	
Module – 2	
Iteration, Strings, Files	08
Textbook 1: Chapters 5–7	
RBT: L1, L2, L3	
Module – 3	
Lists, Dictionaries, Tuples, Regular Expressions	08
Textbook 1: Chapters 8 – 11	
RBT: L1, L2, L3	
Module – 4	
Classes and objects, Classes and functions, Classes and methods	08
Textbook 2: Chapters 15 – 17	
RBT: L1, L2, L3	
Module – 5	•
Networked programs, Using Web Services, Using databases and SQL	08
Textbook 1: Chapters 12–13, 15	
RBT: L1, L2, L3	
Course Outcomes: After studying this course, students will be able to	

- Course Outcomes: After studying this course, students will be able to
 - Examine Python syntax and semantics and be fluent in the use of Python flow control and functions.
 - Demonstrate proficiency in handling Strings and File Systems.
 - Create, run and manipulate Python Programs using core data structures like Lists, Dictionaries and use Regular Expressions.
 - Interpret the concepts of Object-Oriented Programming as used in Python.
 - Implement exemplary applications related to Network Programming, Web Services and Databases in Python.

Question paper pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

INTRODUCTION TO DOT NET FRAMEWORK FOR APPLICATION DEVELOPMENT

(OPEN ELECTIVE)

(Effective from the academic year 2018 -2019)

SEMESTER - VII

Subject Code	18CS754	CIE Marks	40
Number of Contact Hours/Week	3:0:0	SEE Marks	60
Total Number of Contact Hours	40	Exam Hours	3 Hrs

CREDITS -3

Course Learning Objectives: This course will enable students to:

- Inspect Visual Studio programming environment and toolset designed to build applications for Microsoft Windows
- Understand Object Oriented Programming concepts in C# programming language.
- Interpret Interfaces and define custom interfaces for application.
- Build custom collections and generics in C#
- Construct events and query data using query expressions

Construct events and query data using query expressions	1
Module – 1	Contact
	Hours
Introducing Microsoft Visual C# and Microsoft Visual Studio 2015: Welcome to C#,	08
Working with variables, operators and expressions, Writing methods and applying scope,	
Using decision statements, Using compound assignment and iteration statements, Managing	
errors and exceptions	
T1: Chapter 1 – Chapter 6	
RBT: L1, L2	
Module – 2	
Understanding the C# object model: Creating and Managing classes and objects,	08
Understanding values and references, Creating value types with enumerations and	
structures, Using arrays	
Textbook 1: Ch 7 to 10	
RBT: L1, L2	
Module – 3	
Understanding parameter arrays, Working with inheritance, Creating interfaces and defining	08
abstract classes, Using garbage collection and resource management	
Textbook 1: Ch 11 to 14	
RBT: L1, L2	
Module – 4	
Defining Extensible Types with C#: Implementing properties to access fields, Using	08
indexers, Introducing generics, Using collections	
Textbook 1: Ch 15 to 18	
RBT: L1, L2	
Module – 5	
Enumerating Collections, Decoupling application logic and handling events, Querying in-	08
memory data by using query expressions, Operator overloading	
Textbook 1: Ch 19 to 22	
RBT: L1, L2	
Course outcomes: The students should be able to:	
Build applications on Visual Studio .NET platform by understanding the syntax and	semantics of

C#

- Demonstrate Object Oriented Programming concepts in C# programming language
- Design custom interfaces for applications and leverage the available built-in interfaces in building complex applications.
- Illustrate the use of generics and collections in C#
- Compose queries to query in-memory data and define own operator behaviour

Question paper pattern:

The question paper will have TEN questions.

There will be TWO questions from each module.

Each question will have questions covering all the topics under a module.

The students will have to answer FIVE full questions, selecting ONE full question from each module.

Text Books:

- 2. Mark Michaelis, "Essential C# 6.0", 5th Edition, Pearson Education India, 2016.
- 3. Andrew Troelsen, "Prof C# 5.0 and the .NET 4.5 Framework", 6th Edition, Apress and Dreamtech Press, 2012.

AI AND ML APPLICATION DEVELOPMENT LABORATORY (Effective from the academic year 2018 -2019) SEMESTER – VII					
Subject Code	18AIL76	CIE Marks	40		
Number of Contact Hours/Week	0:2:2	SEE Marks	60		
Total Number of Lab Contact Hours Exam Hours 3 Hrs					

Credits - 2

Course Learning Objectives: This course will enable students to:

- Explore the knowledge of AI and ML concepts and practice to groom students into well-informed application developers.
- Demonstrate the knowledge of human cognition, Artificial Intelligence, Machine Learning and data engineering for designing intelligent systems
- Apply computational knowledge and project development skills to provide innovative solutions.
- Strong practice in AI and ML programming through a variety of AI and ML problems.
- Develop AI and ML applications using front-end and back-end tools

Descriptions (if any): 1. The programs can be implemented in either JAVA or Python.

2. Data sets can be taken from standard repository

Part A

- 1. Write a program to implement **k-Nearest Neighbour algorithm** to classify the iris data set. Print both correct and wrong predictions.
- 2. Develop a program to apply K-means algorithm to cluster a set of data stored in .CSV file. Use the same data set for clustering using **EM algorithm**. Compare the results of these two algorithms and comment on the quality of clustering.
- 3. Implement the non-parametric **Locally Weighted Regressionalgorithm** in order to fit data points. Select appropriate data set for your experiment and draw graphs
- 4. Build an Artificial Neural Network by implementing the **Backpropagation algorithm** and test the same using appropriate data sets
- 5. Demonstrate **Genetic algorithm** by taking a suitable data for any simple application.
- 6. Demonstrate **Q learning** algorithm with suitable assumption for a problem statement.

PART B

Mini Project

- Use Java, C#, PHP, Python, or any other similar front-end tool. Developed mini projectns must be demonstrated on desktop/laptop as a stand-alone or web based application
- Installation procedure of the required software must be demonstrated, carried out in groups and documented in the journal.
- Indicative areas include: health care, education, agriculture, banking, library, agent based systems, registration systems, industry, reservation systems, facility management, super market etc., Similar to but not limited to:

Handwritten Digit Recognition

Prediction of Cardiac Arrhythmia type using Clustering and Regression Approach

Hybrid Regression Technique for House Prices Prediction

An Iris Recognition Algorithm for Identity Authentication

An Approach to Maintain Attendance using Image Processing Techniques

Unconstrained Face Recognition

Vehicle Number Plate Detection System

Detection of Fake News

Stock Prediction using Linear Regression

Prediction of Weather Report

Analyzing Bike Sharing Trends

Sentiment Analysis for Movie Reviews

Analyzing and Recommendations of Music Trends

Forecasting Stock and Commodity Prices

Diabetes Prediction

Speech Recognition

Spam Detection using neural Networks in Python

Combining satellite imagery and to predict poverty

Conduct of Practical Examination:

• Experiment distribution

- o For laboratories having only one part: Students are allowed to pick one experiment from the lot with equal opportunity.
- For laboratories having PART A and PART B: Students are allowed to pick one experiment from PART A and one experiment from PART B, with equal opportunity.
- Change of experiment is allowed only once and marks allotted for procedure to be made zero of the changed part only.
- Marks Distribution (Subjected to change in accordance with university regulations)
 - s) For laboratories having only one part Procedure + Execution + Viva-Voce: 15+70+15 = 100 Marks
 - t) For laboratories having PART A and PART B
 - i. Part A Procedure + Execution + Viva = 6 + 28 + 6 = 40 Marks
 - ii. Part B Procedure + Execution + Viva = 9 + 42 + 9 = 60 Marks

NEURAL NETWORKS AND DEEP LEARNING (Effective from the academic year 2018 -2019) SEMESTER – VIII					
Subject Code	18AI81	CIE Marks	40		
Number of Contact Hours/Week	3:0:0	SEE Marks	60		
Total Number of Contact Hours 40 Exam Hours 3 Hrs					
CREDITS – 03					

Course Learning Objectives: This course will enable students to:

- Identify the deep learning algorithms which are more appropriate for various types of learning tasks in various domains.
- Implement deep learning algorithms and solve real-world problems.
- Execute performance metrics of Deep Learning Techniques.

Module – 1	Contact
	Hours
Introduction to ANN:	08
Biological to Artificial neuron, Training an MLP, Training a DNN with TensorFlow, Fine	
tuning NN HyperParametersUp and Running with TensorFlow	
Chapter 9 and 10	
Module-2	<u> </u>
Deep Neural network: Introduction, Vanishing Gradient problems, Reusing	08
Pretrained layers, Faster optimizers, avoiding over fitting through regularization	
Chapter 11	
Module-3	
Distributing Tensor flow across devices and servers: Multiple devices on a single	08
machine, multiple servers, parallelizing NN on a Tensor Flow cluster	
Convolution Neural Network: Architecture of the visual cortex, Convolutional	
layer, Pooling layer, CNN architecture	

Chapter 12 and 13	
Module-4	ı
Recurrent Neural Network: Recurrent neurons, Basic RNN in Tensor Flow,	08
Training	
RNN , Deep RNNs, LSTM Cell, GRU Cell, NLP	
Chapter 14	
Module-5	<u> </u>
Autoencoders: Efficient data representation, Performing PCA, Stacked	08
autoencoders, Unsupervised pretraining using SA, Denoising, Sparse autoencoders,	
variational and other autoencoders.	
Reinforcement Learning: Learning to optimize rewards, policy search,	
Introduction to OpenAI Gym, Neural network polices, Evaluating actions, Policy	
gradients, Markov decision processes, TDL and Q-learning, Learning to play	
Ms.Pac-man using Deep Q Learning	
Chapter 15 and 16	

Course outcomes: The students should be able to:

- Identify the deep learning algorithms which are more appropriate for various types of learning tasks in various domains.
- Implement deep learning algorithms and solve real-world problems.
- Execute performance metrics of Deep Learning Techniques.

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

and validation of models, Optimization via Simulation.

Textbook 1: Ch. 11.4, 11.5, 10

RBT: L1, L2, L3

Course Outcomes: The student will be able to:

- Explain the system concept and apply functional modeling method to model the activities of a static system
- Describe the behavior of a dynamic system and create an analogous model for a dynamic system;
- Simulate the operation of a dynamic system and make improvement according to the simulation results.

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Course Learning Objectives: This cour	rse will enable stud	dents to:	
 Describe the basics of Soft com 	puting		
• Explain the process Fuzzy &Ger	netic Algorithm 1	to solve the optimization prol	blem.
 Analyse the Neuro Fuzzy system 	n for clustering and	d classification.	
• Illustrate the process of swarm in	ntelligence system	to solve real world problems.	
Module – 1	<u> </u>		Contact
			Hours
Introduction to Soft computing: Ne Hybrid systems and its applications.	eural networks, F	Suzzy logic, Genetic algorithm	ns, 08
Introduction to classical sets and fur	zzv sets: Classic	cal relations and fuzzy relation	ns,
Membership functions.	<i>y</i>	,	
T1: Chapter 1 and 7& 8			
Module – 2			
Fuzzification and Defuzzification			08
T1: Chapter 9 & 10			
Module – 3			
· ·		raditional algorithms, Simple C	GA 08
General genetic algorithms, Operators, S	Stopping condition	s for GA flow.	
T1: Chapter 15.1 To 15.10			

Swarm Intelligence System: Introduction, background of SI, Ant colony system

08

Working of ant colony optimization, ant colony for TSP.

T2: 8.1 to 8.5 RBT: L1, L2

Module – 5

Unit commitment problem, particle Swarm Intelligence system

08

Artificial bee colony system, Cuckoo search system.

T2: 8.6 to 8.9 RBT: L1, L2

Course outcomes: The students should be able to:

- Implement machine learning through neural networks.
- Design Genetic Algorithm to solve the optimization problem.
- Develop a Fuzzy expert system.

• Model Neuro Fuzzy system for clustering and classification

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

MODERN INFORMATION RETRIEVAL (Effective from the academic year 2018 -2019) SEMESTER – VIII					
Subject Code	18AI824	CIE Marks	40		
Number of Contact Hours/Week 3:0:0 SEE Marks 60					
Total Number of Contact Hours40Exam Hours3 Hrs					
CREDITS - 03					

Course Learning Objectives: This course will enable students to:

- To learn the classical techniques of Information Retrieval and extract meaningful patterns from it.
- To get an insight into practical algorithms of textual document indexing, relevant ranking, web mining, text analytics and their performance evaluations.
- To acquire the necessary experience to design, and implement applications using Information Retrieval systems

Retrieval systems	
Module – 1	Contact Hours
Introduction: Basic Concepts - Retrieval Process - Modeling - Classic Information	08
Retrieval – Set Theoretic, Algebraic and Probabilistic Models.	
Text Book 1: Chapter 1, Chapter 2	
Module – 2	
Retrieval Techniques: Structured Text Retrieval Models –Retrieval Evaluation –	08
Word Sense Disambiguation.	
Text Book 1: Chapter 3	
Module – 3	
Querying: Languages – Key Word based Querying – Pattern Matching – Structural	08
Queries – Query Operations – User Relevance Feedback – Local and Global	
Analysis	
Text Book 1: Chapter 4, Chapter 5	
Module – 4	
Text Operations: Document Pre-processing - Clustering - Text Compression -	08
Indexing and Searching – Inverted files – Boolean Queries – Sequential searching –	
Pattern matching.	
Text Book 1: Chapter 7, Chapter 8	
Module – 5	
User Interface&Applications: User Interface and Visualization – Human Computer	08
Interaction – Access Process – Starting Points – Query Specification - Context –	
User relevance Judgment – Interface for Search. Searching the Web – Challenges –	
Characterizing the Web – Search Engines – Browsing – Metasearchers – Online IR	
systems – Online Public Access Catalogs.	
1	1

Text Book 1: Chapter 10, Chapter 13, Chapter 14

Course outcomes: The students should be able to:

- Apply information retrieval principles to locate relevant information in large collections of data
- Implement features of retrieval systems for web-based search tasks.
- Apply the common algorithms and techniques for information retrieval related to document indexing and query processing
- Demonstrate a thorough understanding and solid knowledge of the principles and techniques of

human-computer interaction

- Implement graphical user interfaces with modern software tools
- Develop and design interactive software systems applications for real time applications
- Design and develop web applications for the effective informational retrieval

Question Paper Pattern:

- The question paper will have ten questions.
- Each full Question consisting of 20 marks
- There will be 2 full questions (with a maximum of four sub questions) from each module.
- Each full question will have sub questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.
